UNCLASSIFIED

I have reviewed the document and find it to be appropriate and helpful. It will be of great assistance in my practice. Some minor comments:

1. Results of genetic testing are often less than 100% accurate or predictive. This is not probably as clearly acknowledged as it should be in this document and may have implications for disclosure whether there is a reduced level of certainty.
2. section 2.2.2 Predictive or presymptomatic The second sentence does not logically follow the first and may have been misplaced.

Regards, Alastair Corbett
