### Investigator Grants 2022 Peer Review Guidelines

**Opening date:** 19 January 2022  
**Closing date and time:** 17.00 ACT local time on 16 March 2022  
**Commonwealth policy entity:** National Health and Medical Research Council (NHMRC)  
**Sapphire assistance and enquiries:** NHMRC Research Help Centre  
Phone: 1800 500 983 (+61 2 6217 9451 for international callers)  
Email: help@nhmrc.gov.au

Note: NHMRC’s Research Help Centre aims to provide a reply to all requests for general assistance within two working days. This timeframe may be delayed during peak periods or for more detailed requests for assistance.

1. Introduction

The National Health and Medical Research Council (NHMRC) is responsible for managing the Australian Government’s investment in health and medical research in a manner consistent with Commonwealth legislation, guidelines and policies. NHMRC has a responsibility to ensure taxpayers’ funds are invested appropriately to support the best health and medical research. Expert peer review assists us in fulfilling this responsibility.

This guide outlines the overarching principles and obligations under which the Investigator Grant peer review process operates, including:

- obligations in accordance with legislation, guidelines and policies
- how to disclose interests and manage conflicts, and
- standards and best practice for the conduct of peer review.

NHMRC will publicly notify the sector of any change in peer review process via its communications, such as through NHMRC’s website and newsletters.

This guide should be read in conjunction with the:

- Investigator Grants 2022 Guidelines, available on GrantConnect, which set out the rules, objectives and other considerations relevant to NHMRC funding.
- Policy on the Disclosure of Interests requirements for prospective and appointed NHMRC committee members (Section 39 Committees). This Policy outlines peer reviewers’ responsibilities in order to ensure all disclosures of interests are addressed in a rigorous and transparent way throughout the period of a peer reviewer’s participation in NHMRC Committees.

2. Key changes

NHMRC recognises the impacts of the COVID-19 pandemic on Australia’s health and medical research community and has updated assessment processes to reflect these impacts.

Peer reviewers must follow these updated processes:

- In track record assessment, peer reviewers must consider COVID-19 related circumstances, as outlined by applicants, as part of career disruptions or other relative to opportunity considerations under the provisions of NHMRC’s Relative to Opportunity Policy (Appendix I).

- Peer reviewers should note that applicants have been advised that they may include information on any potential significant and long-term impacts of the COVID-19 pandemic on their proposed research, and proposals for managing such risks, as part of their research risk management plan within the grant proposal.

- Peer reviewers are not to let the potential impacts of the COVID-19 pandemic on the proposed research affect the assessment of the research proposal of an application (e.g., the feasibility of accessing certain patient or population groups with social distancing restrictions in place).

- Peer reviewers must note that changes to the research proposal of a funded application, necessitated by the impacts of the COVID-19 pandemic (e.g., the commencement of a project needs to be delayed by six months until COVID-19 restrictions are eased) will be considered through NHMRC’s postaward management and grant variations processes. Such considerations do not form part of the peer review assessment of the proposal, particularly given that the long-term impacts of the pandemic are still unknown.
Peer reviewers should note the following significant changes for the Investigator Grants 2022 grant opportunity:

- **Appendix E** has been updated to advise that assessment of the publications track record will no longer include the list of all publications from the past 10 years (extracted from the Sapphire Profile), and will instead focus on up to 10 of the applicant’s nominated best publications from the past 10 years (taking into consideration career disruptions). This change will help to ensure that assessment of publication track record focuses on the quality and contribution to science rather than the quantity of publications. Further information on this change, including a list of frequently asked questions, can be found on the NHMRC website.
- NHMRC will consider preprints in track record assessment. For further details on what constitutes an acceptable preprint, refer to **Appendix E**.
- Updated advice has been provided at Appendix E to clarify that assessment of knowledge gain is to focus on the entire research vision/plan for the next five years.
- **Appendix H(i)** has been added to provide advice to peer reviewers on how to assess applicant track records where peer reviewers consider an applicant has applied at the incorrect Level and has not adequately justified the Level for which they have applied.

3. **Principles, conduct and obligations during peer review**

The peer review process requires all applications to be reviewed by individuals with appropriate expertise. This carries an obligation on the part of peer reviewers to act in good faith, in the best interests of NHMRC and the research community and in accordance with NHMRC policies (outlined below).

3.1. **NHMRC’s principles of peer review**

NHMRC’s principles of peer review (the Principles) are high-level, guiding statements that underpin all NHMRC’s peer review processes, and include:

- **Fairness.** Peer review processes are fair and seen to be fair by all.
- **Transparency.** Applies to all stages of peer review.
- **Independence.** Peer reviewers provide independent advice. There is also independent oversight of peer review processes by independent Chairs/Peer Review Mentors and Observers, where relevant.
- **Appropriateness and balance.** There is appropriate experience, expertise and representation of peer reviewers assessing applications.
- **Research community participation.** Persons holding taxpayer-funded grants should willingly make themselves available to participate in peer review processes, whenever possible, in accordance with the obligations in the Funding Agreement.
- **Confidentiality.** Participants respect that confidentiality is important to the fairness and robustness of peer review.
- **Impartiality.** Peer review is objective and impartial, with appropriate processes in place to manage disclosures of interest.
- **Quality and excellence.** NHMRC will continue to introduce evidence-based improvements into its processes to achieve the highest quality decision-making through peer review.

Additional details underpinning the Principles can be found at **Appendix A**.
3.2. The Australian Code for the Responsible Conduct of Research

The Australian Code for the Responsible Conduct of Research (the Code) requires researchers participating in peer review do so in a way that is ‘fair, rigorous and timely and maintains the confidentiality of the content’.

The Code is supported by additional supplementary guidance, including Peer Review: A guide supporting the Australian Code for the Responsible Conduct of Research.

3.3. Disclosures of interest

3.3.1. What is an interest?

NHMRC is committed to ensuring that interests of any kind are dealt with consistently, transparently and with rigour, in accordance with sections 16A and 16B of the Public Governance, Performance and Accountability Rule 2014 (made under the subsection 29(2) of the Public Governance, Performance and Accountability Rule 2013 (PGPA Act)).

In particular, under section 29 of the PGPA Act, ‘an official of a Commonwealth entity who has a material personal interest that relates to the affairs of the entity must disclose details of the interest’. This obligation is ongoing and not limited to a particular point in time.

For the purposes of this document, the terms ‘material personal interest’ and ‘interest’ are regarded as interchangeable and whilst the term ‘interest/s’ has been used for ease of reading, this policy includes guidance on each.

3.3.2. What is a Conflict of interest (CoI)?

A CoI exists when there is a divergence between professional responsibilities (as a peer reviewer) and personal interests. Such conflicts have the potential to lead to biased advice affecting objectivity and impartiality. By managing any conflict, NHMRC maintains the integrity of its processes in the assessment of scientific and technical merit of the application.

For NHMRC peer review purposes, interests may fall into the broad domains of:

- Involvement with the application under review
- Working relationships
- Professional relationships and associations
- Social relationships or associations
- Collaborations
- Teaching or supervisory relationships
- Financial relationships or interests
- Other relevant interests or relationships

For further information, peer reviewers should consult the NHMRC Policy on the Disclosure of Interests Requirements for Prospective and Appointed NHMRC Committee Members (Section 39 Committees).

Researchers frequently have a CoI that cannot be avoided. Decision making processes in research often need expert advice, and the pool of experts in a field can be so small that all the experts have some link with the matter under consideration. An individual researcher should therefore expect to be conflicted from time to time, be ready to acknowledge the conflict and make disclosures as appropriate.

An outline of potential CoI situations and guidance is provided for peer reviewers at Appendix B.

3.3.3. Disclosure of interests in the peer review process

Peer reviewers must identify and disclose interests they may have with any of the Chief Investigators (CIs) on applications they will be reviewing. After appointment as a peer reviewer, but before assessing any applications, peer reviewers are required to disclose their interests in writing. While interests must be disclosed at the beginning of the peer review process, new or previously unrecognised interests must be disclosed at any stage of the peer review process. Declarations must include details that substantiate when collaborations occurred (i.e. month and year). NHMRC will use these details to verify and determine the level of conflict. Any peer reviewer who has an interest that is determined by NHMRC to be a ‘high’ CoI will not be able to participate in the review of that application. However, they can provide scientific advice at the request of NHMRC.
3.3.4. Failure to disclose an interest

A failure to disclose an interest without a reasonable excuse will result in the termination of the peer reviewer’s appointment under section 44B of the NHMRC Act (section 44B also covers failure to comply with section 29 of the PGPA Act).

It is important for peer reviewers to inform NHMRC of any circumstances which may constitute an interest, at any point during the peer review process. Accordingly, peer reviewers are encouraged to consult the secretariat if they are uncertain about any disclosure of interest matter.

3.4. Freedom of Information (FoI)

NHMRC is subject to the Freedom of Information Act 1982 which provides a statutory right for an individual to seek access to documents. If documents that deal with peer review fall within the scope of a request, the FoI process includes consultation and exemptions. NHMRC endeavours to protect the identity of peer reviewers assigned to a particular application.

3.5. Complaints

NHMRC deals with any complaints, objections and requests for clarification on the peer review process. NHMRC may contact peer reviewers involved to obtain additional information on particular application/s. Further information about the NHMRC complaints process can be found on the NHMRC website.
4. Investigator Grant peer review process

4.1. Overview of the Investigator Grant peer review process

<table>
<thead>
<tr>
<th>Date</th>
<th>Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>16 March 2022</td>
<td>Deadline for Investigator Grant application submission</td>
</tr>
<tr>
<td>Mid – late March 2022</td>
<td>Application eligibility review and confirmation^</td>
</tr>
<tr>
<td>Mid-March – Late April 2022</td>
<td>Peer reviewer training (including online tutorials and documentation)</td>
</tr>
<tr>
<td>Late March – mid-April 2022</td>
<td>Peer reviewers disclose interests and suitability against applications</td>
</tr>
<tr>
<td>Late March – mid-April 2022</td>
<td>Assessments against the Indigenous Research Excellence Criteria obtained</td>
</tr>
<tr>
<td>Late April 2022</td>
<td>Peer Review Mentor Video</td>
</tr>
<tr>
<td>May 2022</td>
<td>Peer reviewers review applications and submit scores against Investigator Grant assessment criteria and written comments for each allocated application</td>
</tr>
<tr>
<td>June-July 2022</td>
<td>Internal quality assurance of assessments, including review of written summaries for inappropriate comments and checks to identify potential outlier scores^</td>
</tr>
<tr>
<td>July-August 2022</td>
<td>Funding recommendations finalised and progressed through the approvals process</td>
</tr>

<td>August 2022</td>
<td>Notification of outcomes**</td>
</tr>
</tbody>
</table>

^Eligibility can be determined at any stage throughout the process.
*Clarification sought from peer reviewers where required
**Date is indicative and subject to change.

Further information on the steps outlined in this process is provided in section 4.3 Reviewing Investigator Grant applications.
### 4.2. Roles and responsibilities

The roles and responsibilities of those participating in the Investigator Grant peer review process are identified in the table below.

#### Investigator Grant peer review participants table

<table>
<thead>
<tr>
<th>Roles</th>
<th>Responsibilities</th>
</tr>
</thead>
<tbody>
<tr>
<td>Peer Review Mentors (PRMs)</td>
<td>Peer Review Mentors (PRMs) are senior researchers with experience in conducting Investigator Grant peer review.</td>
</tr>
<tr>
<td></td>
<td>The PRM's role is to assist with the training and mentoring of peer reviewers on peer review processes.</td>
</tr>
<tr>
<td></td>
<td>PRMs do not assess applications or provide advice on the scientific (or other) merits of individual applications.</td>
</tr>
<tr>
<td></td>
<td>Where applicable, PRMs need to:</td>
</tr>
<tr>
<td></td>
<td>• familiarise themselves with this document and other material as identified by NHMRC staff</td>
</tr>
<tr>
<td></td>
<td>• participate in a recorded video addressing common peer review questions and/or perceptions/myths</td>
</tr>
<tr>
<td></td>
<td>• assist peer reviewers with their duties and in understanding what is expected of them</td>
</tr>
<tr>
<td></td>
<td>• mentor peer reviewers through the assessment stage of peer review, as required or requested, including responding to peer reviewer enquiries ensuring that;</td>
</tr>
<tr>
<td></td>
<td>• the advice provided is consistent with NHMRC peer review processes and leads to an outcome where applications are appropriately considered against the Investigator Grant assessment criteria (Appendix C) and associated category descriptors (Appendix D)</td>
</tr>
<tr>
<td></td>
<td>• peer reviewers consider relative to opportunity, including career disruptions where applicable</td>
</tr>
<tr>
<td></td>
<td>• peer reviewers consistently consider the assessment against the Indigenous Research Excellence Criteria (Appendix F) for applications with an Aboriginal and Torres Strait Islander health focus.</td>
</tr>
<tr>
<td>Peer reviewers</td>
<td>Peer reviewers need to:</td>
</tr>
<tr>
<td></td>
<td>• familiarise themselves with this Guide and other material as identified by NHMRC staff</td>
</tr>
<tr>
<td></td>
<td>• identify and advise NHMRC of all interests they have with applications assigned to them</td>
</tr>
<tr>
<td></td>
<td>• provide a fair and impartial assessment against the Investigator Grant assessment criteria and associated category descriptors (Appendices C and D) for each non-conflicted application assigned, in a timely manner</td>
</tr>
<tr>
<td></td>
<td>• assess track record by taking into consideration research achievements ‘relative to opportunity’, including selected Level, applicant justification, career context, and any career disruptions (Appendix I), where applicable</td>
</tr>
</tbody>
</table>
- assess publication track record focusing on the quality and contribution to science rather than the quantity of publications.
- consider the assessment against the *Indigenous Research Excellence Criteria* (Appendix F) provided for applications with an Aboriginal and Torres Strait Islander health focus, and
- provide written single statement summaries for each application assigned to them.

### Senior NHMRC staff

NHMRC staff with appropriate expertise may be involved in:

- reviewing allocation of applications to peer reviewers, and
- assisting and advising on the peer review process.

### NHMRC staff

Under direction from the CEO, NHMRC staff will be responsible for overall administration of the peer review process and for the conduct of specific activities.

NHMRC staff will:

- invite individuals to participate in the Investigator Grant scheme peer review process as required
- determine whether disclosed interests pose a conflict and the level of that conflict
- act as the first point of contact for peer reviewers and community observers
- provide briefings and supporting materials to peer reviewers
- determine eligibility of applications
- assign applications to the appropriate peer reviewers
- review peer reviewer written single statement summaries for inappropriate comments
- perform checks to identify potential outlier scores against applications
- ensure that all peer reviewers are provided with the necessary information to review each application, and assisting and advising on the peer review process as required
- assist the PRMs in responding to peer reviewer enquiries, and
- seek feedback from participants in the peer review process on improvements for future processes.

### Indigenous health research peer reviewers

Applications nominated as Aboriginal and Torres Strait Islander health will be considered by an Indigenous health research peer reviewer with appropriate expertise in Aboriginal and Torres Strait Islander health.

Indigenous health research peer reviewers will review how well each application addresses NHMRC’s *Indigenous Research Excellence Criteria* (Appendix F).

Indigenous health research peer reviewers will not be required to participate in scoring. They will act as external experts and provide guiding comments to the peer reviewers relating to the *Indigenous Research Excellence Criteria*.

In some instances, Indigenous health research peer reviewers may also be invited to participate in scoring of applications. In these instances, they may also provide an assessment against the Investigator Grant scheme assessment criteria and associated category descriptors (*Appendices C and D*).
Community observers

NHMRC invites respected members of the general community to observe whether NHMRC policy and procedures are being adhered to during the peer review process. Observers assist NHMRC in ensuring that the assessment of all applications is fair, equitable and impartial.

Observers will be briefed on the processes and procedures of the peer review of Investigator Grant applications. They will not participate in the review of any application.

Observers will:

- Identify and advise NHMRC of all conflict of interests and monitor the procedural aspects of peer review.
- Provide feedback to NHMRC on the consistency of peer review processes and policies.

Observers may raise issues of a general nature for advice or action as appropriate with NHMRC staff.

### 4.3. Reviewing Investigator Grant applications

All Investigator Grant applications are assessed against the Investigator Grant scheme assessment criteria and the associated category descriptors at Appendices C and D. Further guidance on assessing applications against the Investigator Grant assessment criteria is provided at Appendix E.

Applications that are accepted by NHMRC as relating to the improvement of Aboriginal and Torres Strait Islander health (see section 4.3.1) are also assessed against the Indigenous Research Excellence Criteria as set out at Appendix F.

#### 4.3.1. Identification of applications with an Aboriginal and Torres Strait Islander health focus

Applications relating specifically to Aboriginal and Torres Strait Islander people's health will be identified by information provided in the application. Researchers with Aboriginal and Torres Strait Islander health expertise will check whether these applications have at least 20 percent of their research effort and/or capacity building focused on Aboriginal and Torres Strait Islander health.

For applications confirmed as relating specifically to Aboriginal and Torres Strait Islander health research, NHMRC will endeavour to obtain at least one external assessment against the Indigenous Research Excellence Criteria (Appendix F) from an assessor with expertise in Aboriginal and Torres Strait Islander health. For further information on assessing applications that have a focus on the health of Indigenous Australians, see Guidance for assessing applications against the Indigenous Research Excellence Criteria at Appendix G.

The assessment against the Indigenous Research Excellence Criteria will be considered by peer reviewers when scoring the assessment criteria at Appendix C.

#### 4.3.2. Receipt and initial processing of applications

NHMRC staff will verify that Investigator Grant applications meet eligibility criteria. Applicants will be advised if their application is ineligible. However, in some instances these applications will remain in the peer review process until their ineligibility is confirmed. Eligibility rulings may be made at any point in the peer review process.

Applications to the Investigator Grant scheme can be submitted in two categories, Emerging Leadership (EL) or Leadership (L)(Category), comprising five levels of salary (Level), as set out in the table below:
<table>
<thead>
<tr>
<th>Category</th>
<th>Salary Levels</th>
<th>RSP Tiers</th>
<th>Title</th>
</tr>
</thead>
<tbody>
<tr>
<td>Leadership</td>
<td>L3</td>
<td>LT4</td>
<td>NHMRC Leadership Fellow</td>
</tr>
<tr>
<td></td>
<td>L2</td>
<td>LT3</td>
<td></td>
</tr>
<tr>
<td></td>
<td>L1</td>
<td>LT2</td>
<td></td>
</tr>
<tr>
<td>Emerging Leadership</td>
<td>EL2</td>
<td>ELT2</td>
<td>NHMRC Emerging Leadership Fellow</td>
</tr>
<tr>
<td></td>
<td>EL1</td>
<td>ELT1</td>
<td></td>
</tr>
</tbody>
</table>

The EL Category is restricted to researchers who are less than or equal to 10 years post-PhD or equivalent and comprises two Levels (EL1 and EL2) with corresponding Research Support Packages (RSPs). The L Category comprises three Levels (L1, L2 and L3) with four tiers of RSP (LT1, LT2, LT3 and LT4). The tier of RSP is not tied to the Level for Leadership Investigator Grants. The Statements of Expectations for each Level of Investigator Grant is at Appendix H.

4.3.3. Disclosure of interests and peer reviewer suitability

Peer reviewers will be provided with a summary of each application and disclose their interests within Sapphire, in accordance with the guidelines provided at section 3.3 and Appendix B.

Some peer reviewers may have a disclosure of interest for which they require a decision. In this case, NHMRC will assess the information provided by the peer reviewer and provide a ruling on the level of CoI.

Peer reviewers are also required to select their level of suitability to assess each application, based on the information available to them in the application summary. Further information and tutorials are available from Sapphire.

4.3.4. Assignment of applications to peer reviewers

Taking into account CoIs and peer reviewer suitability, NHMRC staff will assign applications to peer reviewers. It is expected each reviewer will be assigned approximately 30 applications. However, this is subject to change depending on the number and peer review area of applications. Each application will be assigned up to five reviewers.

4.3.5. Briefing

NHMRC will provide peer reviewers with briefing and supporting materials, as necessary, with further details on their duties and responsibilities in the Investigator Grant peer review process. This will be made available to peer reviewers prior to assessing applications. Additional information and tutorials are available from Sapphire.

4.3.6. Assessment of applications

Peer reviewers will be given access to applications (where no high CoI exists) and will be required to assess and enter their scores in Sapphire. Peer reviewers will assess all applications assigned to them against the assessment criteria, using the category descriptors, taking into account the Level applied for, the applicant's Category/Level justification, career context, career disruptions and other 'relative to opportunity' considerations (Appendix I), and NHMRC Policy and Priorities, where applicable.
NHMRC will aim for a minimum of four independent assessments for each application, with a target of obtaining five independent assessments for each.

Peer reviewers will be able to seek clarification from independent PRMs on peer review processes during the assessment phase.

Peer reviewers are required to provide a brief summary of their assessment for each application they assess, summarising the strengths and weaknesses of the application. This feedback will be provided to the applicant.

Peer reviewers must remember their obligation to remain fair and impartial when providing their feedback to applicants.

To ensure they provide independent scores, peer reviewers must not discuss applications with other peer reviewers.

Peer reviewers must ensure scores and single summary statements are completed by the nominated due date. If peer reviewers are unable to meet this requirement, they must contact NHMRC promptly to discuss alternative arrangements.

Peer reviewers’ scores will be used to create ranked lists of applications from which funding recommendations will be based. The overall score will be determined using each peer reviewer’s score for each of the assessment criteria. The overall score, as calculated arithmetically to three decimal places, will take account of the weighting of each criterion.

Based on the calculated ratings, applications will be deemed a category level as follows:

<table>
<thead>
<tr>
<th>Overall score</th>
<th>Deemed category</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.001 – 1.500</td>
<td>1</td>
</tr>
<tr>
<td>1.501 – 2.500</td>
<td>2</td>
</tr>
<tr>
<td>2.501 – 3.500</td>
<td>3</td>
</tr>
<tr>
<td>3.501 – 4.500</td>
<td>4</td>
</tr>
<tr>
<td>4.501 – 5.500</td>
<td>5</td>
</tr>
<tr>
<td>5.501 – 6.500</td>
<td>6</td>
</tr>
<tr>
<td>6.501 – 7.000</td>
<td>7</td>
</tr>
</tbody>
</table>

4.3.6.1. Relative to opportunity and career disruption

Peer reviewers must take into account productivity relative to opportunity and, where applicable, career disruption considerations in the assessment of track record. This reflects NHMRC’s policy that assessment processes should accurately assess an applicant's track record and associated productivity relative to stage of career, including consideration as to whether productivity and contribution are commensurate with the opportunities available to the applicant.

Applicants must justify in their applications their selected Category and Level of Investigator Grant. This applicant justification will be considered by peer reviewers when reviewing an applicant’s track record relative to opportunity.
The *Statements of Expectations* have been updated to clarify NHMRC’s expectations of applicants applying at each Level. Information on how to review applications where peer reviewers consider an applicant has applied at the incorrect Level and has not adequately justified the Level for which they have applied is at Appendix H(ii).

To assist peer reviewers with their assessment, further details regarding relative to opportunity and career disruptions as well as track record assessment for Investigator Grant applications are provided at Appendices I and J.

### 4.3.6.2. Mitigating bias in peer review

NHMRC is raising peer reviewers’ awareness of unconscious bias in the assessment process, in alignment with international practice and to ensure that NHMRC grant applications continue to receive objective and impartial assessments. Understanding bias enables peer reviewers to critically and independently review applications and avoid sub-optimal or unfair outcomes.

This is underpinned by NHMRC’s *Peer Review: A guide supporting the Australian Code for the Responsible Conduct of Research*, which states that peer reviewers should be aware of how their own biases (conscious or unconscious) could affect the peer review process, including in relation to gender, ethnicity, nationality, institutional employer and research discipline.

To minimise or avoid bias, peer reviewers are encouraged to take action to address the unintended and systematic biases which prevent unprejudiced consideration of an application. To increase peer reviewers’ awareness of the types of cognitive biases that can occur during peer review, NHMRC recommends the San Francisco Declaration on Research Assessment (DoRA) guidance on Rethinking Research Assessment.

NHMRC is also committed to addressing gender equality to promote fairness, transparency, equality and diversity in health and medical research. Fostering gender equality in peer review is a strategic objective, underpinned by NHMRC’s *Gender Equity Strategy*.

**Peer reviewer participation in the online Harvard Implicit Association Test for gender and science**

In support of the objective, NHMRC encourages peer reviewers to complete the online Harvard Implicit Association Test (IAT) for gender and science. The IAT for gender and science, used by several research funding agencies nationally and internationally, is designed to help participants identify any implicit associations they may have between gender and participation in a science career.

By completing the test, peer reviewers gain a better understanding and increased awareness of how unconscious attitudes may affect their decisions, which prepares them to carry out their duties to the high standards of fairness and rigour expected by NHMRC. Peer reviewers should continue to follow all peer review principles and processes outlined in these guidelines, ensuring that each application is accurately reviewed against the assessment criteria (Appendix C). NHMRC does not have access to, nor does it seek, peer reviewers’ information and results for the IAT for gender and science in the peer review process.

Peer reviewers must also familiarise themselves with any additional materials provided by NHMRC about unconscious bias awareness and implicit associations during the peer review process.

**Use of gender-neutral language**

To reduce unconscious gender bias, NHMRC has strongly advised applicants to use gender-neutral language. This will limit the opportunity for unconscious gender bias to affect the assessment process.

NHMRC also encourages peer reviewers to use gender-neutral language in the assessment of applications. This means that when preparing written material peer reviewers should:

- avoid the use of gendered pronouns such as he/she or her/his, and instead use gender-neutral alternatives such as CIA/CIB, CI last-name or plural pronouns (they/their) when referring to applicants
- avoid the use of first names, and
- use gender-neutral nouns where appropriate e.g. parental leave rather than maternity/paternity leave.

The use of gender-neutral language in applications is encouraged, but does not form part of the assessment criteria and therefore should not influence your scoring of applications. Peer reviewers are required to consider the proposal on its merits, taking relative to opportunity considerations into account when assessing track record.
Where gender dimensions are important for the research being proposed, applicants have been advised they should be included in the application. Please refer to scheme-specific category descriptors at Appendix D for information on whether gender dimensions are to be considered as a part of assessment.

4.3.6.3. Industry-relevant experience

Peer reviewers are to recognise an applicant’s industry-relevant experience and outputs. To assist peer reviewers with their assessment, the Guide to Evaluating Industry-Relevant Experience is provided at Appendix J.

4.3.6.4. Use of impact factors and other metrics

Peer reviewers are to take into account their expert knowledge of their field of research, as well as the citation and publication practices of that field, when assessing the publication component of an applicant’s track record. Track record assessment takes into account the overall impact, quality and contribution to the field of the published journal articles from the grant applicant, not just the standing of the journal in which those articles are published.

It is not appropriate to use publication metrics such as journal impact factors.

The San Francisco Declaration on Research Assessment (DoRA) makes recommendations for improving the evaluation of research assessment. NHMRC is a signatory to DoRA and adheres to the recommendations outlined in DoRA for its peer review processes.

4.3.6.5. Enhancing reproducibility and applicability of research outcomes

Peer reviewers are required to consider the general strengths and weaknesses of the experimental design of the proposal to ensure robust and unbiased results. Assessment of the experimental design should include consideration of the following, as appropriate:

- scientific premise of the proposed research (i.e. how rigorous were previous experimental designs that form the basis for this proposal)
- techniques to be used
- details for appropriate blinding (during allocation, assessment and analysis)
- strategies for randomisation
- details and justification for control groups
- effect size and power calculations to determine the number of samples/subjects in the study (where appropriate)
- consideration of relevant experimental variables, and
- sex and gender elements of the research to maximise impact and any other considerations relevant to the field of research necessary to assess the rigour of the proposed design.

4.3.6.6. Research integrity issues

The peer review process can sometimes identify possible research integrity issues with applications or applicants (e.g. concerns about possible plagiarism, inconsistencies in the presentation of data, inaccuracies in the presentation of track record information) or the behaviour of other peer reviewers. NHMRC has established specific processes for addressing research integrity concerns that arise in peer review. Peer reviewers must not discuss their concerns with other peer reviewers as this may jeopardise the fair assessment of an application. Instead, these issues should be raised with NHMRC separately from the peer review process. Advice about how to raise concerns and a description of how this process is managed are provided on the NHMRC website.

Applications that are the subject of a research misconduct allegation will continue to progress through NHMRC peer review processes while any investigations are ongoing. NHMRC liaises with the institution regarding the outcome of any investigation and, if necessary, will take action under the NHMRC Research Integrity and Misconduct Policy available on the NHMRC website.
4.3.6.7. Contact between peer reviewers and applicants

Peer reviewers must not contact applicants about their application under review. If this occurs, the peer reviewer may be removed from the process, and there is the potential for exclusion from future NHMRC peer review.

Where an applicant contacts a peer reviewer, the relevant application may be excluded from consideration.

In either case, contact between applicants and peer reviewers may raise concerns about research integrity and NHMRC may refer such concerns to the relevant Administering Institution.

4.3.7. Minimum number of assessments

The minimum number of assessments for an application is regarded as 50 percent plus one of the peer reviewers assigned to score an application. If there is an uneven number of peer reviewers assigned to an application, the minimum number of assessments is the next full number after 50 percent (e.g. three assessments in the case of five peer reviewers).

4.3.8. Principles for setting conditions of funding for NHMRC grants

Setting a condition of funding (CoF) on a grant through the peer review process is, and should be, a rare event. When this does occur, the peer reviewers or NHMRC will use the principles set out below to decide the CoF. These principles aim to achieve a consistent approach, minimise the number of conditions set and ensure conditions are unambiguous and able to be assessed.

CoFs relate to the award of funding, the continuation of funding or the level of funding. They do not relate to conditions which affect either eligibility to apply or subsequent peer review.

The principles are:

- NHMRC seeks to minimise the administrative burden on researchers and Administering Institutions.
- CoFs must not relate to the competitiveness of an application (e.g. project requires more community engagement); these issues should be considered during peer review and be reflected in the scores for the application.
- Any CoFs must be clear and measurable, so that the condition can be readily assessed as having been met.

4.3.9. Providing feedback on applications

When conducting assessments, peer reviewers are required to provide constructive qualitative feedback to applicants that focus on the strengths and weaknesses of the application.

When providing feedback, you should use neutral language and focus only on what has been provided in the application, avoiding extraneous comments or considerations you might have about the research/er. Feedback should be factual and dispassionate. Avoid reference to your own experience of reviewing the application or overly expressive words that convey emotion. You should be mindful at all times to frame your feedback against the assessment criteria and category descriptors.

The table below provides guidance to peer reviewers on what NHMRC considers appropriate or inappropriate when providing feedback on grant applications.
### Avoid comments that:

- Make specific comparisons between applications/applicants
- Are discourteous, derogatory, unprofessional or use emotive or overly expressive (positive or negative) language
- Employ an overly negative or critical tone (i.e. instead of “the applicant failed to”, use “it would improve the application if”)
- Refer to your ability/suitability to review the application
- Refer to issues that are out of the applicant's/reviewer's control (e.g. “This application deserves to be funded”)
- Focus on the quantity of publications rather than the quality and contribution to science
- Minimise accomplishments or claims made by the applicant/s
- Use dismissive language or statements that discount or belittle an application or applicant/s
- Stylistic choices that convey the feelings of the reviewer such as rhetorical questions, speculation or punctuation such as exclamation marks
- Use universal language (e.g. “any expert knows”)
- Question issues of eligibility or integrity of the application or applicant/s. This should be raised with NHMRC separately.

### Instead:

- Highlight the key elements of the application that influenced your scores
- Consider the strengths and weaknesses of the application against each assessment criterion
- Use category descriptors associated with the assessment criteria and ensure they are addressed
- Focus on the information that is provided in the application
- Provide constructive feedback that reflects your scores
- Provide neutral statements
- Write with an objective tone
- Indicate if the Level selected or applicant Category/Level justification impacted your scores/assessment
- Provide specific advice or references to relevant bodies of work you think the applicant/s may have overlooked
- Focus on the quality of publications and contribution to science.

### 4.3.10. Documentation

Peer reviewers may be required to retain personal notes that they made during the peer review process for a certain period, and if so, these must be held securely and in accordance with reviewers’ obligations of confidentiality. NHMRC will notify peer reviewers of any such requirements prior to the peer review process.

### 4.3.11. Funding recommendation

Application scores from all peer reviewers are used to create three ranked lists (Leadership, Emerging Leadership 2 and Emerging Leadership 1). Each ranked list has a pre-determined total budget within the scheme’s budget allocation. These ranked lists will be used to prepare funding recommendations to NHMRC’s Research Committee and Council for advice to the CEO, who will then make recommendations to the Minister for Health. Prior to the lists being finalised NHMRC will conduct quality assurance of assessments to identify any inappropriate comments and potential outlier scores and seek clarification from peer reviewers where required.

### 4.3.12. Notification of outcomes

NHMRC will notify applicants and their Administering Institution’s Research Administration Officer of grant application outcomes.

Feedback will be provided to all applicants in the form of an Application Assessment Summary and a single summary statement from each assigned peer reviewer. The Application Assessment Summary will contain numerical information on the competitiveness of the application that will be drawn from the scores given by peer reviewers.
Appendix A – Understanding the principles of peer review

Fairness

- Peer review processes are designed to ensure that peer review is fair and seen to be fair by all involved.
- Peer reviewers have an obligation to ensure that each application is judged consistently and objectively on its own merits, against published assessment criteria. Peer reviewers must not introduce irrelevant issues into the assessment of an application.
- Peer reviewers must only address information provided in the application based on its relevance to the assessment criteria. Any information or issues relating to an applicant outside of the application must not be considered in the peer reviewer’s assessment. Applications will be subject to scrutiny and evaluation by individuals who have appropriate knowledge of the fields covered in the application.
- Peer reviewers should ensure that their assessments are accurate and that all statements are capable of being verified.
- Complaints processes are outlined on the NHMRC website. All complaints to NHMRC relating to the peer review process are dealt with independently and impartially.

Transparency

- NHMRC will publish key dates, all relevant material for applicants and peer reviewers, and grant announcements on its website and/or via GrantConnect.
- NHMRC publicly recognises the contribution of participants in the peer review process, through publishing their names on the NHMRC website.¹

Independence

- Peer reviewers must provide independent and impartial assessment of applications. Peer reviewer assessments may be informed by input from other experts (e.g. when considering expert reports) but must not be unduly influenced by the views of other researchers or stakeholders.
- The order of merit determined by peer reviewers is not altered by NHMRC. However, additional applications may be funded ‘below the funding line’ in priority or strategic areas.

Appropriateness and balance

- Peer reviewers are selected to meet the scheme’s objectives and to ensure adequate expertise to assess the applications received.
- NHMRC endeavours to ensure that peer reviewers are selected with regard to an appropriate representation of gender, geography and large and small institutions.

Confidentiality

- NHMRC provides a process by which applications are considered by peer reviewer’s in-confidence. In addition, NHMRC is bound by the provisions of the Privacy Act 1988 in relation to its collections and use of personal information, and by the commercial confidentiality requirements under section 80 of the NHMRC Act.
- Peer reviewers are to treat applications in-confidence and must not disclose any matter regarding applications under review to people who are not part of the process.

¹ Such information will be in a form that prevents applicants determining which particular experts were involved in the review of their application.
• Any information or documents made available to peer reviewers in the peer review process are confidential and must not be used other than to fulfil their role.

• NHMRC is subject to the Freedom of Information Act 1982 which provides a statutory right for an individual to seek access to documents. If documents that deal with peer review fall within the scope of a request, there is a process for consultation and there are exemptions from release. NHMRC will endeavour to protect the identity of peer reviewers assigned to a particular application.

Impartiality

• Peer reviewers must disclose all interests and matters that may, or may be perceived to, affect objectivity in considering particular applications.

• Peer reviewers must disclose interests with applications being reviewed, including:
  o research collaborations
  o student, teacher or mentoring relationships
  o employment arrangements, and
  o any other relationship that may, or may be seen to, undermine fair and impartial judgement.

• Disclosures of interest are managed to ensure that no one with a high conflict is involved in the assessment of relevant applications.

Quality and excellence

• NHMRC will continue to introduce evidence-based improvements into its peer review processes.

• Any significant change will be developed in consultation with the research community and may involve piloting new processes.

• NHMRC will strive to introduce new technologies that are demonstrated to maximise the benefits of peer review and improve the efficiency and effectiveness of the process while minimising individual workloads.

• NHMRC will undertake post-scheme assessment of all its schemes with feedback from the sector.

• NHMRC will provide advice, training and feedback for peer reviewers new to NHMRC peer review.

• Where NHMRC finds peer reviewers to be substandard in their performance, NHMRC may provide such feedback directly to the peer reviewer or their institution.
Appendix B – Guidance for declaring and assessing disclosures of interest

Peer reviewers are required to disclose all interests that are relevant, or could appear to be relevant, to the proposed research.

An interest is a collaboration or relationship which may, or could be perceived to, affect impartial peer review and thus needs to be disclosed and transparently managed (where necessary) to safeguard the integrity of the peer review process. It is essential that peer reviewers not only disclose their own actual interests relating to proposed research (real interest), but also collaborations and relationships that could be perceived by stakeholders to affect impartial peer review (perceived interest). Failure to do so without a reasonable excuse may result in the peer reviewer being removed from the peer review process in accordance with subsection 44B(3) of the NHMRC Act.

A disclosure does not always equate to a conflict of interest (CoI). In determining if an interest is a conflict, peer reviewers should give consideration to the following values that underpin the robust nature of peer review:

- **Impartiality**: The benefits of peer reviewers’ expert advice needs to be balanced with the risk of real or perceived interests affecting an impartial review.
- **Significance**: Not all interests are equal. The type of interest needs to be considered in terms of its significance and time when it occurred.
- **Integrity through disclosure**: Peer review rests on the integrity of peer reviewers to disclose any interests and contribute to transparently managing any real or perceived conflicts in a rigorous way. The peer review system cannot be effective without trusting peer reviewers’ integrity.

In determining if an interest is a ‘High’, ‘Low’, or ‘No’ conflict, the responsibility is on the peer reviewer to consider the specific circumstances of the situation. This includes:

- the interest’s significance
- its impact on the impartiality of the reviewer, and
- maintaining the integrity of the peer review process.

Once a peer reviewer discloses an interest they can provide an explanation of the interest in Sapphire to enable a judgement of its significance. Wherever possible, peer reviewers are required to provide sufficient detail in the explanation, such as date (month and year) and nature of the interest. Disclosures are to be documented for interests with both CIs and AIs.

**The written declaration of interest is retained for auditing purposes by NHMRC. The details below provide general examples and are not to be regarded as a prescriptive checklist.**
## HIGH Conflict of interest

<table>
<thead>
<tr>
<th>Situation</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Associated with application and/or Chief Investigator (CI)</td>
<td>✔ Peer reviewer is a CI or AI on the application under review.</td>
</tr>
<tr>
<td></td>
<td>✔ Peer reviewer has had discussions/significant input into the study design or research proposal of this application.</td>
</tr>
<tr>
<td>Collaborations</td>
<td>✔ Peer reviewer is actively collaborating or has collaborated with the CI in the last three calendar years on publications (co-authorship), pending grant applications and/or existing grants.</td>
</tr>
<tr>
<td>Working relationships</td>
<td>✔ Peer reviewer and a CI currently work or are negotiating future employment in the same:</td>
</tr>
<tr>
<td></td>
<td>- research field at an independent Medical Research Institute.</td>
</tr>
<tr>
<td></td>
<td>- Department or School of a university.</td>
</tr>
<tr>
<td></td>
<td>- Department of a hospital.</td>
</tr>
<tr>
<td></td>
<td>✔ Peer reviewer is in a position of influence within the same organisation as a CI, or has a pecuniary interest in the organisation (either perceived or real) e.g. Dean of Faculty or School/Institute Directors.</td>
</tr>
<tr>
<td></td>
<td>✔ Peer reviewer and a CI are on the same committee/board and the peer reviewer or their affiliated organisation would stand to benefit from, or be affected, by the outcome of the application (i.e. vested interested in the proposed research). For example, peer reviewer and CI are both on the same governing board within their organisation.</td>
</tr>
<tr>
<td>Professional relationships and interests</td>
<td>✔ Peer reviewer or a peer reviewer’s employer is directly affiliated or associated with an organisation(s) that may have, or may be perceived to have, a vested interest in the research. For example, a pharmaceutical company, which has provided drugs for testing, has a vested interest in the outcome.</td>
</tr>
<tr>
<td>Social relationship and/or interests</td>
<td>✔ The peer reviewer or a peer reviewer’s immediate family member has a personal or social relationship with a CI on the application.</td>
</tr>
<tr>
<td>Teaching or supervisory relationship</td>
<td>✔ Peer reviewer has taught or supervised a CI for either undergraduate or postgraduate studies within the last three years.</td>
</tr>
<tr>
<td></td>
<td>✔ Peer reviewer and a CI co-supervise an undergraduate or postgraduate student and collaborate with each other on the student’s research.</td>
</tr>
<tr>
<td>Direct financial interest in the application</td>
<td>✔ Peer reviewer has the potential for financial gain if the application is successful, such as benefits from: payments from resulting patents, supply of goods and services, access to facilities, and provision of cells/animals as part of the collaboration.</td>
</tr>
<tr>
<td></td>
<td>✔ Peer reviewer receives research funding or other support from a company and the research proposal may involve collaboration/association with that company.</td>
</tr>
<tr>
<td>Other interests or situations</td>
<td>✔ Peer reviewer had or has an ongoing scientific disagreement and/or dispute with a CI. This may still be ruled as a high conflict if the events in question occurred beyond the last three years.</td>
</tr>
</tbody>
</table>
**HIGH Conflict of interest**

<td>Example</td>
</tr>
<tr>
<td>-----------------------------------------------</td>
<td>--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td><strong>Collaborations</strong></td>
<td><strong>✔</strong> Peer reviewer and a CI on the application have collaborated more than three years ago.</td>
</tr>
<tr>
<td></td>
<td><strong>✔</strong> Within the last three years, the peer reviewer was part of large collaborations involving the CI, but did not interact or collaborate with the CI directly. Examples include:</td>
</tr>
</tbody>
</table>
|                                               |   - publication(s) as part of a multi-author collaborative team (i.e. ≥10 authors)  
   - pending grant applications or existing grants involving more than ten CIs (e.g. large collaborative research centres and network grants) |
|                                               | **✔** A colleague is planning future collaborations with a CI.                                                                                                                                          |
|                                               | **✔** Peer reviewer and a named AI on the application are actively collaborating or have previously collaborated within the last three years.                                                             |
|                                               | **✔** Without financial gain or exchange, a peer reviewer and a member of the research team have shared cells/animals/reagents/specialist expertise (biostatistician) etc. but have no other connection to each other. |
|                                               | **✔** Collaboration between a peer reviewer’s colleague/research group and a CI on the application, where the peer reviewer did not participate or have a perceived interest (e.g. direct leadership or responsibility for the researchers involved in the collaboration) in the collaboration, or vice versa. |
|                                               | **✔** Peer reviewer is considering, planning or has planned a future collaboration with a CI on the application but has no current collaborations, including joint publications/applications under development. |
|                                               | **✔** Peer reviewer and CI have previously proposed or planned a collaboration that did not progress.                                                                                                   |
| **Working relationships**                     | **✔** Peer reviewer and a CI currently work or are negotiating future employment in:                                                                                                                    |
|                                               |   - the same institution but have no direct association or collaboration.  
   - the same Faculty or College of a university but in different Schools or Departments and do not know each other.                                                                                   |
<p>|                                               | <strong>✔</strong> Peer reviewer and a CI work for two organisations that are affiliated but there is no direct association/collaboration.                                                                            |
|                                               | <strong>✔</strong> Peer reviewer and a CI are on the same committee/board, but otherwise have no working or social relationships that constitute a high conflict and the peer reviewer or their affiliated organisation would not benefit from, or be affected by, the outcome of the application (i.e. do not have a vested interest in the proposed research). For example, the peer reviewer and CI are both on an external government advisory committee. |
| <strong>Professional relationships and interests</strong>  | <strong>✔</strong> Peer reviewer and CI’s organisations are affiliated but there is no direct association/collaboration between the CI and peer reviewer and there is no other link that would constitute a high conflict. |</p>
<table>
<thead>
<tr>

<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Situation</strong></td>
<td><strong>Example</strong></td>
</tr>
<tr>
<td>Social relationship and/or interests</td>
<td>Peer reviewer's partner or immediate family member has a known personal/social (non-work) or perceived relationship with a CI on the application, but the peer reviewer themselves does not have any link with the CI that would be perceived or constitute a high conflict.</td>
</tr>
<tr>
<td><img src="https://via.placeholder.com/150" alt="Image" /> &amp; ✔</td>
<td>Peer reviewer taught or supervised the CI for either undergraduate or postgraduate studies, co-supervised a CI or the peer reviewer’s research was supervised by a CI, more than three years ago.</td>
</tr>
<tr>
<td><img src="https://via.placeholder.com/150" alt="Image" /> &amp; ✔</td>
<td>Peer reviewer and a CI are co-supervisors of an undergraduate or postgraduate student, but they are not collaborating with each other on the student's research (e.g. where one of the supervisors may provide additional expert input or guidance to the student’s project or thesis).</td>
</tr>
<tr>
<td><img src="https://via.placeholder.com/150" alt="Image" /> &amp; ✔</td>
<td>Peer reviewer has an associated patent pending, supplied goods and services, improved access to facilities, or provided cells/animals etc. to a named CI for either undergraduate or postgraduate studies.</td>
</tr>
<tr>
<td><img src="https://via.placeholder.com/150" alt="Image" /> &amp; ✔</td>
<td>Peer reviewer has intellectual property that is being commercialised by an affiliated institution. Peer reviewer has previously provided and/or received cells/animals to/from a CI on the application, but has no other financial interests directly relating to this application that would constitute a high conflict.</td>
</tr>
<tr>
<td><img src="https://via.placeholder.com/150" alt="Image" /> &amp; ✔</td>
<td>Peer reviewer receives research funding or other support from a company, and the research proposal may impact upon the company.</td>
</tr>
<tr>
<td><strong>Other interests or situations</strong></td>
<td>Peer reviewer may be, or may be perceived to be, biased in their review of the application. For example, peer reviewer is a lobbyist on an issue related to the application.</td>
</tr>
</tbody>
</table>
Appendix C – Investigator Grants 2022 assessment criteria

Applications for Investigator Grants 2022 are assessed by peer reviewers on the extent to which they address the assessment criteria:

- Track record, relative to opportunity (70%), including selected Level
- Knowledge gain (30%).

Applications will be assessed against the category descriptors at Appendix D.

**Track record** - NHMRC defines ‘track record’ for the Investigator Grant scheme as the value of an individual’s past research achievements, relative to opportunity, not prospective achievements, using evidence. Assessment of track record comprises peer reviewers’ consideration of:

- Publications (35%)
- Research impact (20%)
- Leadership (15%).

Track records are assessed relative to opportunity, taking into consideration selected Level and any career disruptions, where applicable (see Appendix I).

Assessment of publication track record focuses on the quality and contribution to science rather than the quantity of publications.

**Knowledge gain** - NHMRC defines ‘knowledge gain’ for the Investigator Grant scheme as the quality of the proposed research and significance of the knowledge gained. It incorporates theoretical concepts, hypothesis, research design, robustness and the extent to which the research findings will contribute to the research area and health outcomes (by advancing knowledge, practice or policy).

It is recognised that Aboriginal and Torres Strait Islander applicants often make additional valuable contributions to policy development, clinical/public health leadership and/or service delivery, community activities and linkages, and are often representatives on key committees. If applicable, these contributions will be considered when assessing research output and track record.
Appendix D – Investigator Grants 2022 category descriptors

The following category descriptors are used as a guide to scoring an application against each of the assessment criteria.

While the category descriptors provide peer reviewers with some benchmarks for appropriately scoring each application, it is not essential that all descriptors relating to a given score are met.

The category descriptors are a guide to a ‘best fit’ outcome. Peer reviewers will consistently refer to these category descriptors to ensure thorough, equitable and transparent assessment of applications.

Assessing Aboriginal and Torres Strait Islander contributions
It is recognised that Aboriginal and Torres Strait Islander applicants make additional valuable contributions to policy development, clinical/public health leadership and/or service delivery, community activities and linkages, and are often representatives on key committees. If applicable, these contributions should be considered when assessing research output and track record.
Track record, relative to opportunity (70%), including selected Level

Publications (35%)

Publication assessment will focus on up to 10 of the applicant’s top publications in the past 10 years (taking into account career disruptions), supported by applicant explanations for each nominated publication. Assessment of publication track record will focus on the quality of the research and contribution to science rather than the quantity of publications.

Appendix E – Guidance for assessing applications against the Investigator Grants 2022 assessment criteria

The Investigator Grant scheme supports the research programs of outstanding investigators at all career stages. The assessment criteria for Investigator Grant 2022 applications are:

- Track record, relative to opportunity, including selected Level
  - Publications (35%)
  - Research impact (20%)
  - Leadership (15%), and
- Knowledge gain (30%).

The following advice should be taken into consideration when assessing applications.

Track record (70%)

NHMRC defines ‘track record’ for the Investigator Grant scheme as the value of an individual’s past research achievement, relative to opportunity, not prospective achievements, using evidence-based components. Assessment of track record comprises peer reviewers’ consideration of:

- Publications (35%)
- Research impact (20%)
- Leadership (15%).

To further support NHMRC’s objective that all applicants are assessed relative to opportunity, the Relative to Opportunity Policy (Appendix I) was updated for the Investigator Grants 2021 funding round. This update broadened the scope of circumstances considered during relative to opportunity assessment, ensuring that each applicant’s track record and associated productivity are considered in the context of their specific career circumstances.

1. Publications

NHMRC accepts 10 types of publication: Accepted for Publication; Books/Chapters; Editorials; Journal Articles (Original Research); Journal Articles (Review); Letters to the Editor; Preprints; Research Report – commissioned by Government, Industry or Other; Technical Report; and Text Book.

A preprint is a complete and public draft of a scientific document, yet to be certified by a journal through peer review.

To be considered in this category, a preprint:

- must be available in a recognised scientific public archive or repository such as arXiv, bioRxiv, Peer J Preprints, F1000 Research, etc.
- should be searchable via a digital object identifier (DOI). For preprints that are incrementally updated as work progresses, each version should have a unique DOI and only the latest version of the work should be included in the grant application.

Assessment of publications will use a seven-point scoring system, supported by category descriptors (see Table 1 of Appendix D). Peer reviewers will be required to form a judgement based on up to 10 of the applicant’s nominated publications from the past 10 years (taking into account career disruptions), including the applicant explanation for each nominated publication.

The focus on up to 10 nominated publications, rather than the applicant’s total list of publications from the past 10 years, is to ensure emphasis of the publications track record assessment is on the quality and contribution to science, rather than quantity of publications.
Assessment of an applicant’s research impact will be based on:

i. the reach and significance of their claimed research impact (7%)

ii. the contribution of their research program to the research impact (6%)

iii. the contribution of the applicant to the research program (7%).

These three components of research impact are assessed separately using three seven-point scoring systems supported by category descriptors at Tables 2, 3 and 4 of Appendix D.

For the assessment of ‘reach and significance’, the seven-point scoring system is further divided for Emerging Leadership and Leadership applicants (Table 2 of Appendix D). This is to recognise that early and mid-career researchers will have had less time to accumulate research impact.

NHMRC defines the impact of research as the verifiable outcomes that research makes to knowledge, health, the economy and/or society. Impact is the effect of the research after it has been adopted, adapted for use, or used to inform further research.

Research impact is the verifiable outcomes from research and not the prospective or anticipated effects of the research. For example, a prospective publication linked to the applicant’s research program is not demonstrated or corroborated impact.

Research impact also includes research that leads to a decision not to use a particular diagnostic, treatment or health policy.

**Figure 1: Key definitions for the assessment of research impact**

<table>
<thead>
<tr>
<th>Research impact</th>
<th>The verifiable outcomes that research makes to knowledge, health, the economy and/or society. Impact is the effect of the research after it has been adopted, adapted for use, or used to inform further research.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Research program</td>
<td>A cohesive body of research by the applicant, not limited to an individual case study (as used in a clinical context) or a single publication. It may be recent or in the past.</td>
</tr>
<tr>
<td>Research program’s contribution to the research impact</td>
<td>The degree to which the applicant’s research program was necessary to achieve the impact(s) (knowledge, health, economic, and/or social impact).</td>
</tr>
<tr>
<td>Applicant’s contribution to the research program</td>
<td>The level of the applicant’s contribution (e.g. leadership, intellectual and/or technical input) to the research program.</td>
</tr>
</tbody>
</table>

Peer reviewers should consider, based on the corroborating evidence provided:

- the reach of the research impact
- the significance of the research impact in:
  - informing knowledge to advance research
  - improving products, processes, behaviours/prevention, policies, practices
  - improving the nation’s economic performance
  - improving the health and well-being of the community.
For the purposes of assessing impact, NHMRC uses four specific descriptors:

- **Knowledge impact** – Research that has contributed to discoveries and/or demonstrable benefits emerging from adoption, adoption or use of the discovery to inform further research.

- **Health impact** – Research that has contributed to improvements in health through new therapeutics, diagnostics, or disease prevention; or by contributing to improvements in disease prevention, diagnosis and treatment, health policy, health systems, and quality of life.

- **Economic impact** – Research that has contributed to the economic performance of the nation in which the research program was conducted, and/or for which the impact was intended, by creating new industries, jobs and valuable products, and reducing health care costs. An economic impact may also contribute to social or health impacts, including human capital gains and the value of life and health.

- **Social impact** – Research that has contributed to improvements in the health of the society, including the well-being of the end user and the community. This may include improved ability to access health care services and to participate socially.

Peer reviewers should note that applicants can demonstrate the contribution of their research program within a single category of impact (knowledge, health, economic and social) or across multiple categories. As one research program may result in multiple impact types, peer reviewers should refer to the definitions of the four impact types when assessing claims. If impacts from one research program are claimed across multiple categories, the overall research impact score is determined holistically and on balance across the different categories (it is not additive).

For applicants who have provided impacts for more than one research program, peer reviewers are to determine whether any one of the research programs and their impacts have been sufficiently demonstrated and corroborated, and score accordingly. Applicants are not to be scored in an additive method for multiple research programs.

**Reach** is the extent, spread, breadth, and/or diversity of the beneficiaries of the impact, relative to the type of research impact.

**Significance** is the degree to which the impact has enabled, enriched, influenced, informed or changed the performance of policies, practices, products, services, culture, understanding, awareness or well-being of the beneficiaries (not the prevalence or magnitude of the issue).

Applicants were instructed to include one research program to demonstrate research impact(s) across one or more of the four types of impact. A research program is a cohesive body of research by the applicant, as opposed to disparate bodies of research that each have different objectives and impacts. It is not limited to an individual case study (as used in a clinical context) or a single publication. A research program may be recent or in the past.

Applicants need to outline the research program with corroborating evidence that can be independently assessed by peer reviewers. Applicants were required to provide evidence sufficient and strong enough to demonstrate their claims for all three impact criteria. Applicants may use the same evidence across the three impact criteria if appropriate. Peer reviewers will need to decide whether the impact claims have been sufficiently demonstrated and corroborated. A poorly corroborated or non-corroborated research impact or contribution to impact should receive a score of one, in alignment with the category descriptors.

Peer reviewers should consider the degree to which the applicant’s research program was necessary to achieve the impact(s) (knowledge, health, economic, and/or social impact) based on robust and verifiable evidence. The relationship between the applicant’s research program (including related activities) and the impact may be foreseen or unforeseen, and may be an end product or demonstrated during the research process. Research impact examples may include the adoption or adaptation of existing research.

Relative to opportunity and to the applicant’s field of research, peer reviewers should consider the level of the applicant’s contribution (e.g. leadership, intellectual and/or technical input) to the research program based on robust and verifiable evidence.

**Verification of evidence provided against research impact claims**

Peer reviewers can verify evidence provided by applicants. If an applicant has not provided evidence of their research impact, they should receive a score of one, in alignment with the category descriptors. Peer reviewers must not seek evidence to support the research impact claims of an applicant who has not provided evidence.
Peer reviewers should also note that, for corroborating evidence, it is the quality of the evidence provided, not the quantity, that should be considered. Applicants only need to provide evidence sufficient and strong enough to verify the claims, not all evidence that may be on the public record. A poorly or non-corroborated research contribution should receive a score of one, in alignment with the category descriptors at Tables 2, 3 and 4 of Appendix D.

Examples of evidence are listed in Table 1 below. Evidence examples may be relevant to more than one research impact type.

## Social Impact

| Improvements in the health of society, including the well-being of the end user and the community. This may include improved ability to access health care services, to participate socially (including empowerment and participation in decision making) and to quantify improvements in the health of society. | 
|----------------------------------|---|
| uptake or demonstrated use of evidence by decision makers/policy makers |
| qualitative measures demonstrating changes in behaviours, attitudes, improved social equity, inclusion or cohesion |
| improved environmental determinants of health |
| improved social determinants of health |
| changes to health risk factors |

### 3. Leadership

For the assessment of Leadership, peer reviewers are required to review applicant outputs over the past 10 years (taking into account career disruptions) across each of the four Leadership elements:

- Research Mentoring
- Research Policy and Professional Leadership
- Institutional Leadership
- Research Programs and Team Leadership.

The assessment of Leadership will be against the category descriptors at Table 5 of Appendix D.

Track records are assessed relative to opportunity, taking into consideration selected Level and any career disruptions, where applicable (see Appendix I).

## Knowledge Gain (30%)

NHMRC defines ‘knowledge gain’ for the Investigator Grant program as the quality of the proposed research and significance of the knowledge gained. It incorporates theoretical concepts, hypothesis, research design, robustness and the extent to which the research findings will contribute to the research area and health outcomes (by advancing knowledge, practice or policy).

In their response to the knowledge gain criteria, applicants were asked to:

- describe their research vision for the next five years
- outline the proposed research objectives, basic methodologies and expected outcomes
- describe the importance of the problem to be researched, the planned outcome of the research plan, and the potential significance of the research
- describe the support for their proposed research (e.g. access to technical resources, infrastructure, equipment and facilities, and if required, access to additional expertise necessary to achieve proposed outcomes).
For the assessment of ‘knowledge gain’ peer reviewers are to consider:

- the clarity and justification of the research hypotheses/rationale
- the strengths and weaknesses of the scientific framework, study design, methods and analyses
- whether the proposal tackles a major question addressing an issue of critical importance to advance the research or health area (not prevalence or magnitude of issue)
- the access to the technical resources, infrastructure, equipment and facilities, and if required, access to additional expertise necessary to achieve the proposed outcomes
- access to the technical resources required to achieve project outcomes
- the potential for significant and transformative changes/outcomes in the scientific knowledge, practice or policy underpinning human health issues
- the potential research outputs including: intellectual property, publications, policy advice, products, services, teaching aids, consulting, contract research, spin-offs, licensing etc.

As applicants are not required to provide budget justifications, reviewers are to consider all of the proposed research described in the five year research vision when assessing knowledge gain, irrespective of whether any part of the research plan has already obtained funding. Your assessment is of the prospective research outlined in the research plan/vision.

The significance of the study is not a measure of the prevalence/incidence of the health issue (e.g. cancer versus sudden infant death syndrome) but the extent to which the study will address the health issue.

Category descriptors for knowledge gain are at Table 6 of Appendix D.
Appendix F – Indigenous Research Excellence Criteria

To qualify as Aboriginal and Torres Strait Islander health research, at least 20 percent of the research effort and/or capacity building must relate to Aboriginal and Torres Strait Islander health.

Qualifying applications must address the NHMRC *Indigenous Research Excellence Criteria* as follows:

- **Community engagement** – the proposal demonstrates how the research and potential outcomes are a priority for Aboriginal and Torres Strait Islander communities with relevant community engagement by individuals, communities and/or organisations in conceptualisation, development and approval, data collection and management, analysis, report writing and dissemination of results.

- **Benefit** – the potential health benefit of the project is demonstrated by addressing an important public health issue for Aboriginal and Torres Strait Islander people. This benefit can have a single focus or affect several areas, such as knowledge, finance and policy or quality of life. The benefit may be direct and immediate, or it can be indirect, gradual and considered.

- **Sustainability and transferability** – the proposal demonstrates how the results of the project have the potential to lead to achievable and effective contributions to health gain for Aboriginal and Torres Strait Islander people, beyond the life of the project. This may be through sustainability in the project setting and/or transferability to other settings such as evidence based practice and/or policy. In considering this issue, the proposal should address the relationship between costs and benefits.

- **Building capability** – the proposal demonstrates how Aboriginal and Torres Strait Islander people, communities and researchers will develop relevant capabilities through partnerships and participation in the project.

Peer reviewers will consider these in their overall assessment of the application, when scoring the assessment criteria set out in Appendix C.
Appendix G – Guidance for assessing applications against the Indigenous Research Excellence Criteria

Peer reviewers should consider the following when assessing applications that have a focus on the health of Indigenous Australians. The points below should be explicit throughout the application and not just addressed separately within the Indigenous criteria section.

Community engagement

- Does the proposal clearly demonstrate a thorough and culturally appropriate level of engagement with the Aboriginal and Torres Strait Islander community or health services prior to submission of the application?
- Is there clear evidence that the level of engagement throughout the project will ensure the feasibility of the proposed study?
- Has the application demonstrated evidence that any of the methods, objectives or key elements of the proposed work have been formed, influenced or defined by the community?
- Were the Indigenous community instrumental in identifying and inviting further research into the health issue and will the research outcomes directly benefit the ‘named’ communities?
- Is there a history of working together with the ‘named’ communities e.g. co-development of the grant, involvement in pilot studies or how the ‘named’ communities will have input/control over the research process and outcomes across the life of the project?

Benefit

- Does the proposal clearly outline the potential health benefits (both intermediate and long term, direct and indirect) to Aboriginal and Torres Strait Islander people?
- Does the proposal demonstrate that the benefit(s) of the project have been determined or guided by Aboriginal and Torres Strait Islander people, communities or organisations themselves?

Sustainability and transferability

- Does the proposal:
  - provide a convincing argument that the outcomes will have a positive impact on the health of Aboriginal and Torres Strait Islander peoples, which can be maintained after the study has been completed?
  - have relevance to other Indigenous communities?
  - clearly plan for and articulate a clear approach to knowledge translation and exchange?
  - demonstrate that the findings are likely to be taken up in health services and/or policy?
- Will the outcomes from the study make a lasting contribution to Aboriginal and Torres Strait Islander communities and their wellbeing?

Building capability

- Does the proposal outline how Aboriginal and Torres Strait Islander people and/or communities will benefit from capability development?
- Does the proposal outline how researchers and individuals/groups associated with the research project will develop capabilities that allow them to have a greater understanding/engagement of Aboriginal and Torres Strait Islander peoples?
Appendix H – Statements of Expectations

The following *Statements of Expectations* describe the typical research experience and academic level expected at each Investigator Grant Level, and are to be used as a guide for applicants when selecting the Category and Level of their Investigator Grant application.

All applicants are required to provide a justification of the selected Category and Level in the application form.

NHMRC expects that applicants will apply at an appropriate Level to help achieve parity and fairness for all Investigator Grant applicants.

Recognising the diversity of the sector and the many different settings in which researchers are employed, NHMRC recognises that individuals can achieve academic promotion for a range of reasons unrelated to their research career (e.g. teaching and learning, administration, community engagement). Investigator Grant Levels are not strictly correlated with academic levels. The required justification will support assessment where applicants fall outside the broad benchmarks.

Peer reviewers will consider this justification when assessing an applicant’s track record relative to opportunity. Further information on how to assess, relative to opportunity, the track records of applicants deemed to have applied at an inappropriate Level is at Appendix H(i).

Note: The applicant justification does not form part of the assessment of eligibility to apply at that Level.

Applicants who have previously held an NHMRC Fellowship or Investigator Grant are expected to apply at a Level commensurate with their previous or currently held Fellowships, factoring in the career progression that those grants support. Applicants are reminded that previous NHMRC Fellowships or Investigator Grants held affect eligibility to apply at some Investigator Grant Levels. Applicants who have never received an NHMRC Fellowship or Investigator Grant should refer to these expectations and apply at a Level commensurate with their experience and profile.

The descriptors provide a broad benchmark and it is not essential that all elements be met.

<tr>
<th>Leadership Level 3 (L3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is expected that L3 Investigator Grant recipients will typically be more than 20 years post-PhD (or equivalent) and appointable at <strong>Academic Level E</strong>, and be leading international authorities in their research area with demonstrated:</td>
</tr>
<tr>
<td>• significant original contributions of major importance that have had a positive impact on health and medical research, the health system, economy and/or the health of the population</td>
</tr>
<tr>
<td>• experience in leading a major independent research program(s) involving national and international collaborative networks</td>
</tr>
<tr>
<td>• national and international contributions through leadership in their scientific discipline (e.g. in research policy and on advisory committees)</td>
</tr>
<tr>
<td>• extensive supervision, mentoring and promotion of early and mid-career researchers</td>
</tr>
<tr>
<td>• significant leadership roles within their department, centre, institution or organisation, that extend beyond their research.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Leadership Level 2 (L2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is expected that L2 Investigator Grant recipients will typically be between <strong>15 and 20 years</strong></td>
</tr>
</tbody>
</table>
post-PhD (or equivalent) and appointable at Academic Level D or E (or equivalent), and be leading national and rising international authorities in their research area with demonstrated:

- substantial and original contributions that are of major benefit to health and medical research, the health system, economy and/or the health of the population
- experience in leading an independent research program(s) involving national collaborative networks
- national and possibly international contributions to their scientific discipline (e.g. research advisory boards, peer review)
- supervision, mentoring and promotion of early and mid-career researchers
- leadership roles within their department, centre, institution or organisation that extend beyond their research.

### Leadership Level 1 (L1)

It is expected that L1 Investigator Grant recipients will typically be between 10 and 15 years post-PhD (or equivalent) and appointable at Academic Level C or D (or equivalent), and be national authorities in their research area with demonstrated:

- original contributions that are of major benefit to health and medical research, the health system, economy and/or the health of the population
- ability to independently conceive and direct research programs, coordinate a team of researchers and generate national collaborations
- national contributions to their scientific discipline (e.g. public advocacy, peer review, research advisory boards or professional societies)
- supervision, mentoring and promotion of early and mid-career researchers
- contribution(s) within their department, centre, institute or organisation that extend beyond their research e.g. membership of regulatory or management committees

### Emerging Leadership Level 2 (EL2)

It is expected that EL2 Investigator Grant recipients will typically be between 5 and 10 years post-PhD (or equivalent) and appointable at Academic Level B (or equivalent), and be recognised for their expertise in their research area with demonstrated:

- original contributions of influence in their field of expertise
- ability to contribute to the conception and direction of research projects, while developing independence
- experience in supervising a small research team
- national contributions to their scientific discipline (e.g. public advocacy, community leadership, peer review and professional societies)
- contributions within their department, centre, institute or organisation e.g. organising journal clubs, seminar series etc.

It is also expected that Emerging Leadership applicants will be working within a larger team under the mentorship of more senior researchers.
**Emerging Leadership Level 1 (EL1)**

It is expected that EL1 Investigator Grant recipients will typically be between **0 and 5 years post-PhD** (or equivalent) and will be beginning to gain recognition in their research area with demonstrated:

- original contribution(s) in their field of expertise
- ability to contribute to the conception of research projects
- scientific contributions within their region, state or territory (e.g. community leadership, state level contribution to a professional society)
- limited but developing supervision of research staff and students
- contributions within their department, centre, institution or organisation e.g. organising journal clubs, seminar series etc.

It is also expected that Emerging Leadership applicants will be working within a larger team under the mentorship of more senior researchers.

Guidance on relationships between NHMRC Fellowship schemes and the Investigator Grant Levels is provided in **Table 1** below.

Appendix H(i) - Advice on reviewing applications submitted at an inappropriate Category/Level

Reviewers must score track record, relative to opportunity (70%), including selected Level, according to the category descriptors and taking into account the Statements of Expectations and the applicant’s Category and Level justification. The intent of the Category and Level justification is to allow peer reviewers to make a fair comparison across a group of applicants. Where peer reviewers consider applicants have applied at an incorrect Level, they are to apply that determination to the relative to opportunity assessment of the applicant’s track record against the category descriptors.

Note that scoring of knowledge gain should not be affected because the research proposal is not assessed relative to opportunity.

All components of the track record category descriptors are to be considered relative to opportunity, including selected Level. Throughout the peer review process, the Category and Level justification must be considered against the typical elements outlined for each Investigator Grant Level within the Statements of Expectations, not just the expected/typical years post-PhD (or equivalent) and/or Academic Level.

For example, an applicant may be <10 years post-PhD and, due to high performance and an excellent track record, their career has progressed quickly and they have achieved Professorial Level. This applicant may apply at Emerging Leadership Level 1 (for which they are eligible) expecting to “compete” against other researchers who may be only one year post-PhD. In this instance, a peer reviewer would need to consider how the applicant’s track record, relative to opportunity, aligns with the Statements of Expectations and, if it doesn’t, whether the applicant has adequately justified the Level for which they applied. This individual may still receive a high score, but may not score as highly as someone who has achieved the same outcome in fewer years post-PhD.

NHMRC requires peer reviewers to carefully consider track record, relative to opportunity, in conjunction with the Category and Level justification provided by applicants. For example, if a Leadership Level 1 applicant’s track record aligns most strongly with the Statements of Expectations Leadership Level 3 descriptors, and the applicant does not adequately justify their selected Level, this can be taken into account by the peer reviewer when assessing the track record, relative to opportunity.

In all cases, peer reviewers are directed to carefully assess how the applicant has presented their justification against the descriptors contained in the Statements of Expectations. Peer reviewers need to determine whether, in their opinion, the applicant has selected the appropriate Level, and apply that determination to the relative to opportunity assessment of the applicant’s track record against the category descriptors.

Peer reviewers are also advised that when providing feedback to applicants it would be appropriate for them to indicate if the Category and Level applied for was not well justified and provide details on where the track record did not align with the Statements of Expectations.
Appendix I – NHMRC Relative to Opportunity Policy

Purpose

NHMRC’s goal is to support the highest quality research that will lead to improvements in health over the short or long term. Peer review by independent experts is used to identify well-designed feasible projects that address a significant question and are undertaken by researchers with demonstrated capacity to perform high quality research.

In most NHMRC grant schemes, peer reviewers are asked to assess the track record of the applicants as well as the proposed research. However, NHMRC recognises that not all research careers are the same and therefore peer reviewers are asked to assess track records ‘relative to opportunity’, taking into account circumstances that have affected the applicant’s research productivity.

The purpose of this appendix is to outline NHMRC’s Relative to Opportunity Policy with respect to:

- peer review of applicant track records
- eligibility to apply for Emerging Leadership Investigator Grants.

Policy approach

NHMRC considers ‘relative to opportunity’ to mean that peer reviewers should assess an applicant’s track record of research productivity and professional contribution in the context of their career stage and circumstances, by taking into consideration whether the applicant’s productivity and contribution are commensurate with the opportunities available to them.

The policy has two components:

- Career disruption – a prolonged interruption to the ability to work due to pregnancy, illness/injury and/or carer responsibilities. Career disruptions are taken into account in track record assessment and in determining an applicant’s eligibility to hold an Emerging Leadership Investigator Grant (in terms of years since they received their PhD).

- Other relative to opportunity considerations – any other personal or professional circumstances affecting research productivity. These circumstances are taken into account in track record assessment.

In addition to NHMRC’s principles of peer review, particularly fairness and transparency, the following principles support this objective:

- Research opportunity: Researchers’ outputs and outcomes should reflect their opportunities to advance their career and the research they conduct.

- Fair access: Researchers should have access to the funding available through NHMRC’s grant program consistent with their experience and career stage.

- Career diversity: Researchers with career paths that include time spent outside academia should not be disadvantaged. NHMRC recognises that time spent in other sectors, such as industry, may enhance research outcomes for both individuals and teams.

NHMRC expects that peer reviewers will give clear and explicit attention to these principles to identify the highest quality research and researchers. NHMRC recognises that life circumstances can be varied and therefore it is not possible to implement a formulaic approach to applying relative to opportunity considerations during peer review.
Consideration of career circumstances during peer review of grant applications

Under the Relative to Opportunity Policy, researchers’ career circumstances are considered during track record assessment. This aims to take into account salient research opportunity considerations over the course of a research career and is not intended to address minor changes to life circumstances.

Circumstances considered during peer review include, but are not limited to:

**Research**
- research role(s) and responsibilities, career stage, and amount of time spent as an active researcher

**Resources and facilities**
- available resources and facilities, including:
  - the extent to which any additional research personnel and/or collaborators contribute to the applicant’s research program
  - situations where research is being conducted in remote or isolated communities

**Professional responsibilities**
- clinical, administrative and/or teaching workload
- time employed in other sectors
- building relationships of trust with Aboriginal and Torres Strait Islander communities over long periods

**Personal circumstances**
- disability (including mental health conditions and psychosocial disability) or illness
- caring responsibilities that do not interrupt the applicant’s career for an extended period (that would meet the definition of a career disruption) but still affect research productivity
- for Aboriginal and Torres Strait Islander applicants, community obligations including ‘sorry business’
- any other personal circumstances

**Other circumstances**
- relocation of an applicant and their research laboratory or clinical practice setting
- periods of unemployment
- calamities, such as pandemics, bushfires or cyclones.

Relative to opportunity considerations do not include:
- minor (or short-term) changes that occur during the normal course of conducting research, e.g. broken equipment or delayed ethics approval
- minor (or short-term) medical conditions
- recreational leave or general administrative activities related to research, such as preparation of grant applications and publications or committee-related activities.

In considering career circumstances during relative to opportunity assessment, peer reviewers are also required to consider each applicant’s record of research productivity and contribution taking into account their career context, career disruptions, career stage and time spent as an active researcher.

Specifically:
- Peer reviewers should make a holistic assessment of whether the applicant’s research productivity and contribution presented for track record assessment are commensurate with the opportunities available to them. To do this, peer reviewers should consider the information provided in the career overview, career context and career disruption sections of the application, as well as the number of years post-PhD or equivalent (where applicable).
Although applicants provide an estimate of FTE years spent in active research, this is a guide only. Peer reviewers must consider the applicant’s overall circumstances, opportunities for research and the associated impact on their research productivity, as described by the applicant.

Key considerations include but are not limited to:
- applicant career stage
- the typical performance of researchers in the research field
- opportunities for the applicant to engage in research, taking into account as applicable:
  o the number of years they have been research active
  o professional responsibilities and employment situations
  o personal and other circumstances (such as carer responsibilities and disability)
  o the resources and facilities available to the applicant.

In arriving at a score for each element of the track record assessment relative to opportunity, peer reviewers should refer to the category descriptors (Appendix D).

Peer reviewers are expected to consider each applicant’s circumstance on its merits, while maintaining consistency in judgement and reasoning across all applications assigned to them.

Consideration of career disruption during peer review and in determining eligibility for Emerging Leadership Investigator Grants

A career disruption is defined as a prolonged interruption to an applicant’s capacity to work, due to:
- pregnancy
- major illness/injury
- carer responsibilities.

The period of career disruption may be used:
- to determine an applicant’s eligibility for an Emerging Leadership Investigator Grant
- to allow for the inclusion of additional track record information for assessment of an application
- for consideration of track record relative to opportunity by peer reviewers.

A period of career disruption is defined as:
- a continuous absence from work for 90 calendar days or more, and/or
- continuous, long-term, part-time employment (with defined %FTE) due to circumstances classified as career disruption, with the absence amounting to a total of 90 calendar days or more.¹

In determining eligibility of Emerging Leadership Investigator Grant applicants, the 10-year limit on the number of years post-PhD may be extended commensurate with the period of the career disruption.

NOTE: For the purposes of peer review, circumstances not meeting the definition of career disruption may be considered under the career circumstances provisions above.

¹ For example, an applicant who is employed at 0.8 FTE due to childcare responsibilities would need to continue this for at least 450 calendar days to achieve a career disruption of 90 calendar days.
Appendix J – Guide to evaluating industry-relevant experience

Principles

NHMRC is committed to ensuring that knowledge from health and medical research is translated through commercialisation (e.g. by pharmaceutical or medical devices companies), improvements to policy, health service delivery and clinical practice.

Therefore, as a complement to other measures of research excellence (e.g. citation rates), NHMRC considers industry-relevant skills, experience and achievements in its assessment of applicants’ track records.

These measures recognise that applicants who have invested their research time on technology transfer, commercialisation or collaborating with industry, may have gained highly valuable expertise or outputs relevant to research translation. However, NHMRC acknowledges that these researchers will necessarily have had fewer opportunities to produce traditional academic research outputs (e.g. peer reviewed publications).

Therefore, peer reviewers should:

- appropriately recognise applicants’ industry-relevant experiences and results
- allow for the time applicants have spent in commercialisation/industry for ‘relative to opportunity’ considerations.

Who might have industry experience or be preparing for industry experience?

Many applicants to NHMRC may have had industry experiences of various kinds. Examples include, but are not limited to:

1. Researchers who have left academia to pursue a full-time career in industry (e.g. in pharmaceutical, biotechnology or start-up companies). In such instances, outputs must be assessed ‘relative to opportunity’, as there may have been restrictions in producing traditional research outputs (such as peer reviewed publications), but highly valuable expertise gained or outputs produced relevant to research translation (such as patents or new clinical guidelines).

2. Academic researchers whose work has a possible commercial focus. These researchers might not have yet entered into commercial agreements with industry and have chosen to forego or delay publication in order to protect or extend their intellectual property (IP).

3. Academic researchers who have translated their discovery into a collaborative agreement with industry. The researcher may be collaborating with the company in further research and development; may have a licensing agreement; or may have licensed or assigned their IP to the company. A researcher may ultimately leave the academic institution and become Chief Executive Officer, Chief Scientific Officer, Chief Technology Officer, Scientific Advisory Board Member or consultant for a start-up or other company, based on their experience.

4. Academic researchers who are actively collaborating with companies, for example by providing expert research services for fees. Publications of such work might be precluded or delayed according to contract arrangements. The specialised nature of this research might also restrict publication to specialised journals only, as opposed to generalist journals.
### Relevant industry outputs

<table>
