

Mitochondrial Donation Licence Application Form – Application for a Clinical Trial Research and Training Licence

Overview of the mitochondrial donation licensing scheme

In Australia research into mitochondrial donation techniques and its use can only be undertaken when it is authorised by a mitochondrial donation licence issued by the National Health and Medical Research Council's (NHMRC) Embryo Research Licensing Committee (ERLC) in accordance with the *Research Involving Human Embryos Act 2002* (Cth) (RIHE Act).

A mitochondrial donation licence permits the creation and development of an embryo, the creation of embryos containing the genetic material provided by more than two people, the alteration of a cell, and in certain circumstances the placement of an embryo created using a permitted mitochondrial donation technique in a woman.

Mitochondrial donation licences will initially be granted to permit certain research and training and to support a clinical trial to deliver mitochondrial donation to affected families. The initial three types of mitochondrial donation licence are a:

- pre-clinical research and training licence
- clinical trial research and training licence
- clinical trial licence

Once clinical trials have demonstrated the safety and effectiveness of the mitochondrial donation techniques there will be an option for the Parliament of Australia to allow further mitochondrial donation licences that would allow the licence holder to use mitochondrial donation techniques in clinical practice. This would allow accredited assisted reproductive technology (ART) centres that are licensed under the scheme to offer mitochondrial donation in clinical practice.

The scheme also creates the Mitochondrial Donation Donor Register which is maintained by the Department of Health, and stores details about persons born as a result of a mitochondrial donation procedure and their mitochondrial donors.

The mitochondrial donation licensing scheme is separate to the general licence scheme for embryo research not involving mitochondrial donation techniques. Importantly material created under a general licence cannot be used under a mitochondrial donation licence and material created under a mitochondrial donation licence cannot be used under a general licence.

Embryos created under a mitochondrial donation clinical trial licence are specifically created for placement in the body of a particular trial participant.¹ In the event that an embryo created for a woman under a mitochondrial donation clinical trial licence becomes excess to the woman's reproductive needs, it may be used under another mitochondrial donation licence for research and training, however, it cannot be donated to another woman for use in reproductive treatment.

Organisations wishing to undertake research and training in the creation or use of human embryos using a mitochondrial donation technique or run a clinical trial involving a mitochondrial donation technique must apply to ERLC for a licence. ERLC will undertake a comprehensive assessment of each application against the criteria set out in the RIHE Act and issue or refuse licences accordingly.

Role of the NHMRC Embryo Research Licensing Committee

Section 13 of the RIHE Act establishes ERLC, a Principal Committee of NHMRC. ERLC regulates research involving human embryos in accordance with the RIHE Act and with regard to the *Prohibition of Human Cloning for Reproduction Act 2002* (Cth).

The functions of ERLC are to:

- consider applications for licences to conduct research involving human embryos
- consider applications for licences to conduct research, undertake training and conduct a clinical trial involving mitochondrial donation
- issue (subject to conditions) or not issue such licences
- maintain a publicly available database containing information about licences issued
- monitor licensed activities and ensure compliance with the legislation through the appointment of inspectors and take necessary enforcement action, such as cancelling or suspending licences
- report to the Parliament of Australia on the operation of the RIHE Act and the licences issued under this Act
- perform such other functions as are conferred on it by the RIHE Act or any other relevant law.

The use of mitochondrial donation is regulated by a licensing scheme, which allows for licences for research and clinical practice involving mitochondrial donation. ERLC is responsible for administering the licensing scheme.

Criteria ERLC must consider when determining whether to issue a licence

ERLC must consider and be satisfied of specific matters before making a determination to issue a mitochondrial donation licence.² When considering licence applications, ERLC must be satisfied that:

- appropriate protocols are in place to enable proper consent to be obtained before a human egg or human sperm is used in carrying out the technique and to enable compliance with any restrictions on such a consent,³ and
- that the relevant activity or project has been assessed and approved by a Human Research Ethics Committee (**HREC**) constituted and acting in compliance with the National Statement.⁴

ERLC must also have regard to the following:

- restricting the use of embryos, human eggs or zygotes, to that likely to be reasonably necessary to achieve the goals of the activity or project⁵
- any relevant guidance set out in the *Ethical guidelines on the use of assisted reproductive technology in clinical practice and research* (the ART Guidelines) and the *National Statement on Ethical Conduct in Human Research* (the National Statement)⁶
- the assessment of the proposed project by the relevant HREC, and⁷
- whether the applicant has complied with the conditions of any other mitochondrial donation licence issued to them.⁸

ERLC may also seek and have regard to advice from any person having appropriate expertise in considering the application.⁹

2 *Research Involving Human Embryos Act 2002* (Cth) section 28J.

3 *Research Involving Human Embryos Act 2002* (Cth) section 28J(2)(a).

4 *Research Involving Human Embryos Act 2002* (Cth) section 28J(2)(b).

5 *Research Involving Human Embryos Act 2002* (Cth) section 28J(3)(a).

6 *Research Involving Human Embryos Act 2002* (Cth) section 28J(3)(b); *Research Involving Human Embryos Regulations 2017* (Cth) regulation 7H.

7 *Research Involving Human Embryos Act 2002* (Cth) section 28J(3)(c).

8 *Research Involving Human Embryos Act 2002* (Cth) section 28J(3)(d).

9 *Research Involving Human Embryos Act 2002* (Cth) section 28J(4).

Consent to the use of human eggs, human sperm and reproductive or genetic material or cell for mitochondrial donation

It is a condition of all mitochondrial donation licences that each *responsible person* who is the biological donor of the human egg or human sperm or whose reproductive material, genetic material or cell is used under the licence, has given proper consent to that use, and that the licence holder has reported in writing to ERLC that such consent has been obtained, and any restrictions to which the consent is subject.¹⁰

Confidentiality

All those who participate in the mitochondrial donation scheme and in ART activities more generally are entitled to privacy to the degree that is protected by law. Licence applicants should familiarise themselves with the applicable laws and the relevant provisions of the ART Guidelines.

No identifying information is to be provided to ERLC as part of a licence application.

Included with this application form is a collection notice addressing the Australian Privacy Principles (APP) 5.2 matters for mitochondrial donation licence applicants and staff and the HREC Chairperson. All mitochondrial donation licence applicant representatives must confirm that the collection notice has been provided to all persons identifiable in the application and detail in the licence application the measures they have in place to protect individual privacy.

In the consent reports to ERLC referred to above (see **Consent to the use...**) a licence holder must not include in a report to ERLC the name, or any other information that could be used to discover the identity of *responsible person* or mitochondrial donor.¹¹ However this information must be collected and kept by the licence holder as part of the consent process.

Ethics committee approval

ERLC cannot approve a mitochondrial donation licence application unless the activity or project proposed in the application has been assessed and approved by a HREC that is constituted in accordance with, and acting in compliance with, the National Statement.¹²

What does a clinical trial research and training licences authorise?

A clinical trial research and training licence authorises a licence holder to use a permitted mitochondrial donation technique to undertake permitted activities for research and training at an **accredited ART centre** in preparation for using the permitted technique specified in the licence in a particular clinical trial for the purpose of:

- developing protocols for using the technique safely and effectively, in a clinical trial setting, for the purpose of minimising the risk of women's offspring inheriting mitochondria that would predispose them to mitochondrial disease;
- ensuring that each nominated embryologist has technical competence in the use of the technique in accordance with those protocols, and
- ensuring that the holder's facilities, equipment, processes and protocols for using the technique are suitable for using the technique in a clinical trial setting.¹³

The only mitochondrial donation techniques that may be permitted for use under a clinical trial research and training licence are:¹⁴

- maternal spindle transfer (MST)¹⁵
- pronuclear transfer (PNT).¹⁶

¹⁰ *Research Involving Human Embryos Act 2002* (Cth) section 28N(1) and (1A).

¹¹ *Research Involving Human Embryos Act 2002* (Cth) section 28N(2).

¹² *Research Involving Human Embryos Act 2002* (Cth) section 28J(2)(b).

¹³ *Research Involving Human Embryos Act 2002* (Cth) section 28D(1).

¹⁴ *Research Involving Human Embryos Regulations 2017* (Cth) regulation 7B item 2.

¹⁵ A definition of the technique is set out in the *Research Involving Human Embryos Regulations 2017* (Cth) regulation 7C.

¹⁶ A definition of the technique is set out in the *Research Involving Human Embryos Regulation 2017* (Cth) regulation 7D.

The activities that may be permitted by a clinical trial research and training licence are:

- (a) creation of human embryos other than by fertilisation of a human egg by a human sperm, using the permitted technique specified in the licence, and use of such embryos;
- (b) creation and use of human embryos that contain genetic material provided by more than 2 persons, using the permitted technique specified in the licence:
 - i. by fertilisation of a human egg by a human sperm outside the body of a woman; or
 - ii. other than by the fertilisation of a human egg by a human sperm;
- (c) creation of human embryos by a process of the fertilisation of a human egg by a human sperm outside the body of a woman, using the permitted technique specified in the licence, and use of such embryos;
- (d) research and training involving the fertilisation of a human egg by a human sperm up to, including and after the first mitotic division, outside the body of a woman for the purposes of research or training in the use of the permitted technique specified in the licence;
- (e) use of any material (other than an excess ART embryo) created, developed or produced under a mitochondrial donation licence.¹⁷

The activities permitted by a clinical trial research and training licence are only able to be conducted using the single permitted mitochondrial donation technique authorised in the licence.

Restrictions and prohibitions

A clinical trial research and training licence **does not authorise**:

- (a) any use of a human embryo that would:
 - (i) result in the development of a human embryo for a period of more than 14 days, excluding any period when development is suspended; or
 - (ii) involve placing a human embryo into the body of a woman for the purposes of achieving pregnancy in that woman.¹⁸
- (b) the use of a human egg or human sperm without the written consent of the donor or against any restrictions on that consent.¹⁹
- (c) the licence holder to undertake any of the permitted activities anywhere other than at an accredited ART centre.²⁰

All licences will be subject to conditions. Mandatory conditions are set out in the RIHE Act section 28N. Additional licence conditions may also be imposed by ERLC. A copy of the standard conditions for mitochondrial donation licences is available on the NHMRC website at <https://www.nhmrc.gov.au/mitochondrial-donation-0>

¹⁷ *Research Involving Human Embryos Act 2002* (Cth) section 28D(2).

¹⁸ *Research Involving Human Embryos Act 2002* (Cth) section 28D(3).

¹⁹ *Research Involving Human Embryos Act 2002* (Cth) section 28N(1) and (1A).

²⁰ *Research Involving Human Embryos Act 2002* (Cth) section 28D(1).

Explanation of Key Terms

Word	Definition
Accredited ART Centre	Accredited ART Centre means a person or body accredited to carry out assisted reproductive technology by the Reproductive Technology Accreditation Committee of the Fertility Society of Australia. ²¹
APP	Australian Privacy Principles available at https://www.oaic.gov.au/privacy/australian-privacy-principles/
ART Guidelines	NHMRC <i>Ethical guidelines on the use of assisted reproductive technology in clinical practice and research</i> available at https://www.nhmrc.gov.au/art#block-views-block-file-attachments-content-block-1
Constitutional corporation	A constitutional corporation is either a foreign corporation or a trading or financial corporation formed within the limits of the Commonwealth.
ERLC	Embryo Research Licensing Committee is a principal committee of the NHMRC established under section 13 of the <i>Research Involving Human Embryos Act 2002</i> (Cth).
Excess ART embryo	Excess ART embryo means a human embryo that: <ul style="list-style-type: none"> (a) was created by assisted reproductive technology, for use in the assisted reproductive technology treatment of a woman; and (b) is excess to the needs of the woman for whom it was created (and her spouse if any); and each persons has: <ul style="list-style-type: none"> (i) given written authority for use of the embryo for a purpose other than a purpose relating to the assisted reproductive technology treatment of the woman concerned, and the authority is in force at that time; or (ii) determined in writing that the embryo is excess to their needs, and the determination is in force at that time. <p>(see <i>Research Involving Human Embryos Act 2002</i> (Cth) section 9)</p>
Human cell	Human cell includes a human embryonal cell, a human fetal cell, human sperm or a human egg (see <i>Prohibition of Human Cloning for Reproduction Act 2002</i> section 15).
HREC	Human Research Ethics Committee constituted in accordance with the National Statement. For more information on human research ethics committees see https://www.nhmrc.gov.au/research-policy/ethics/human-research-ethics-committees
Mitochondrial Donor	If a particular use of a mitochondrial donation technique results in the creation of a zygote that: <ul style="list-style-type: none"> (c) has nuclear DNA from a woman and a man; and (d) contains mitochondria from a human egg of a different woman; <p>the woman mentioned in paragraph (b) is the donor in relation to that use of the technique.</p>

Word	Definition
Mitochondrial donation technique	<p>Mitochondrial donation technique means a technique, prescribed by the regulations for the purposes of this definition, that:</p> <ul style="list-style-type: none"> (a) can be used to minimise the risk of a woman's offspring inheriting mitochondria from that woman that would predispose the offspring to mitochondrial disease; and (b) involves using assisted reproductive technology to create a zygote that: <ul style="list-style-type: none"> (i) has nuclear DNA from the woman and a man; and (ii) contains mitochondria from a human egg of a different woman; and (c) does not involve: <ul style="list-style-type: none"> (i) intentionally modifying nuclear DNA or mitochondrial DNA; or (ii) using any cell, or any component part of a cell, of an animal; or (iii) creating a chimeric embryo (within the meaning of the <i>Prohibition of Human Cloning for Reproduction Act 2002</i>) or a hybrid embryo.
National Statement	<p>National Health and Medical Research Council (NHMRC) <i>National Statement on Ethical Conduct in Human Research 2007</i> (Updated 2018) available at https://www.nhmrc.gov.au/about-us/publications/national-statement-ethical-conduct-human-research-2007-updated-2018#block-views-block-file-attachments-content-block-1</p>
Permitted technique	<p>A permitted technique is a prescribed technique that is permitted for use under a mitochondrial donation licence. The mitochondrial donation techniques prescribed in the <i>Research Involving Human Embryos Regulations 2017</i> are:</p> <ul style="list-style-type: none"> • maternal spindle transfer • pronuclear transfer • germinal vesicle transfer • first polar body transfer • second polar body transfer. <p>Only certain techniques may be used under particular licences and each licence may only authorise one permitted technique.</p>
Proper consent	<p>In relation to the use of a human egg or a human sperm, the use or creation of a zygote or human embryo, or the creation, development or production of genetic or reproductive material for the purposes of mitochondrial donation, proper consent means consent that is obtained in accordance with</p> <ul style="list-style-type: none"> (a) guidelines issued by the CEO of the NHMRC under the <i>National Health and Medical Research Council Act 1992</i>; and prescribed by the regulations for the purposes of this paragraph; and (b) the ART guidelines <p>(See <i>Research Involving Human Embryos Act 2002 (Cth)</i> section 28N; <i>Research Involving Human Embryos Regulations 2017 (Cth)</i> regulation 7J.)</p>

Word	Definition
Responsible person	<p>In relation to a human egg, the person who was the biological donor of the egg.</p> <p>In relation to a human sperm, the person who was the biological donor of the sperm.</p> <p>In relation to any reproductive or genetic material that is created, developed or produced as authorised by a mitochondrial donation licence, each person whose reproductive or genetic material or cell was used, or is proposed to be used, in the creation, development, production or use of the material.</p>

Contact Details

For further information or queries relating to this Licence Application Form contact Embryo Research Licensing:

Email: embryo.research@nhmrc.gov.au

GPO Box 1421,
CANBERRA ACT 2601

Tel: 1300 064 672 in Australia
+61 2 6217 9000 for international callers.

Important Note

- You are advised to familiarise yourself with the requirements of the *Research Involving Human Embryos Act 2002* and the *Prohibition of Human Cloning for Reproduction Act 2002*.
- You are also advised to consider any relevant State or Territory legislation and, if necessary, seek independent legal advice.
- If additional information is provided as part of the application please include the names of any files that are provided as attachments to the application form.
- When completed and signed by all relevant parties the form should be saved as a PDF file and submitted by email to Embryo Research Licensing at embryo.research@nhmrc.gov.au

ALL SECTIONS OF THIS FORM MUST BE COMPLETED

Section 1 – Applicant details

1.1 APPLICANT INFORMATION**1.1.1 Applicant Organisation²²**

Organisation name

1.1.7 If the applicant is not an accredited ART centre provide proof of:

- (a) the accredited ART centre's consent to use the accredited ART centre and a copy of the agreement between the applicant and the accredited ART centre providing for the use of an accredited ART centre for the licensed activities
- (b) the Reproductive Technology Accreditation Committee (RTAC) accreditation, and
- (c) any other accreditation licence, approval or other recognised certification of the proposed facility/ies.²⁵

Attach a copy of all documentation and note attachment numbers in this box.

²⁴ Research Involving Human Embryos Act 2002 section 28D(1).

²⁵ This includes NATA accreditation of diagnostic laboratories, the licensing of day procedure centres, or any other state and territory, or commonwealth licensing requirement.

1.2 PROPOSED AUTHORISED PERSONS

1.2.1 Principal supervisor(s)²⁶

Title

Given Names

Surname

Position

Contact number(s)

Email address

Role in proposed activity

Describe the person's role in the proposed activity, including information about whether the person will be creating or using embryos or using human cells.

Qualifications and experience

The principal supervisor should be able to demonstrate:

- a high level of professional and scientific expertise
- relevant experience managing large multidisciplinary projects across a range of sites
- relevant experience managing a clinical trial
- relevant qualifications and/or experience in embryology.

Attach a full curriculum vitae and note the attachment number in this box. The CV should indicate relevant embryology or other skills.

1.2.2 Principal investigator(s)²⁷

Title

Given Names

Surname

Position

Contact number(s)

Email address

Role in proposed activity

[Describe the person's role in the proposed activity, including information about whether the person will be creating or using embryos or using human cells.]

Qualifications and experience

The principal investigator must be able to demonstrate:

- a high level of professional and scientific expertise
- relevant experience managing a clinical trial
- relevant qualifications and/or experience in embryology
- appropriate knowledge of mitochondrial donation techniques (the Principal Investigator may be able to demonstrate development of techniques through work with animal models or previous mitochondrial donation licences; include licence details if relevant).

Attach a full curriculum vitae and note the attachment number in this box.

1.2.3 The Principal Investigator confirms they have been given a copy of the *Mitochondrial Donation Licensing Scheme - Privacy and the protection of your personal information* notice.

Yes No

1.2.4 Nominated Embryologist(s) who will use the technique(s) permitted under the licence²⁸

Only the embryologists authorised in the licence may use the mitochondrial donation technique under the licence.²⁹

Title

Given Names

Surname

Position

Contact number(s)

Email address

Role in proposed activity

[Describe the person's role in the proposed research and what activities they will be trained in using the permitted technique.]

Professional certification or qualification details (e.g. Medical Laboratory Scientist ANZSCO 234611 Specialisation: IVF Embryologist CLMS certification.)

Embryologist(s)' consent to being nominated

[Describe how the embryologist(s)' consent to being nominated has been recorded in the organisation's records.]

²⁸ You must nominate one or more embryologists who will be authorised to use the technique under the licence. Only the embryologists listed in the licence are authorised to use the mitochondrial donation technique under the licence. *[Research Involving Human Embryos Act 2002 (Cth) section s28H(5)]*

²⁹ *Research Involving Human Embryos Act 2002 (Cth) section s28H(5).*

Requirements for nominated embryologist(s)

Evidence of embryologist(s)' demonstrated technical competence in the use of the proposed technique, technical competence may be demonstrated through the use of the technique on animal models or through activities under a previous mitochondrial donation licence.

Provide evidence of the embryologist's professional qualifications and relevant professional experience

Evidence that the nominated embryologist(s) understand their obligations under the *Research Involving Human Embryos Act 2002 (Cth)* ³⁰

1.2.5 The nominated embryologist confirms that they have been given a copy of the *Mitochondrial Donation Licensing Scheme - Privacy and the protection of your personal information* notice.

Yes No

1.2.6 Other persons who will carry out activities that are authorised by the licence. ³¹

1.4 CURRENT AND PREVIOUS LICENCES

1.4.1 Details of any previous general licence or other mitochondrial donation licence that has been granted or details of any application(s) for a licence under the RIHE Act that has been refused.

Section 2 – Project Description

PROJECT DETAILS

2.1 Title of the proposed research activity

2.2 Proposed commencement date of licensed activities

2.3 Proposed duration of licensed activities³³

2.4 Permitted technique

A mitochondrial donation licence may permit the licence holder to undertake multiple activities however each licence may only permit the use of one mitochondrial donation technique. If you wish to use multiple techniques additional licence applications are required.³⁴

Tick **one** technique proposed to be used:

- (a) maternal spindle transfer³⁵;
- (b) pronuclear transfer³⁶;

2.5 Proposed activities

A clinical trial research and training licence **does not authorise** the development of an embryo for a period of more than 14 days, excluding any period when development is suspended, or the placement of an embryo in a woman's body.³⁷

Tick the activity or activities being applied for:

- (a) creation of human embryos other than by fertilisation of a human egg by a human sperm, using the permitted technique specified in the licence, and use of such embryos;
- (b) creation of human embryos that contain genetic material provided by more than 2 persons, using the permitted technique specified in the licence:
- (i) by fertilisation of a human egg by a human sperm outside the body of a woman; or
- (ii) other than by the fertilisation of a human egg by a human sperm and the use of such embryos;
- (c) creation of human embryos by a process of the fertilisation of the human egg by a human sperm, outside the body of a woman using the permitted technique specified in the licence and use of such embryos;
- (d) research and training involving the fertilisation of human egg by a human sperm, including and after the first mitotic division³⁸, outside the body a woman for the purposes of research and training in the use of the permitted technique specified in the licence; not.
- (e) use of any material (other than an excess ART embryo) created, developed or produced under a mitochondrial donation licence.

³³ Note that if a licence holder of a clinical trial research and training licence ceases being a constitutional corporation ERLC is taken to have revoked the licence at the time the licence holder ceased being a constitutional corporation [*Research Involving Human Embryos Act 2002* (Cth) section 28V(3)].

³⁴ *Research Involving Human Embryos Act 2002* section 28H(6).

³⁵ As defined by the *Research Involving Human Embryos Regulations 2017* section 7C.

³⁶ As defined by the *Research Involving Human Embryos Regulations 2017* section 7D.

³⁷ *Research Involving Human Embryos Act 2002* section 28D(3).

³⁸ Note that is an offence punishable by up to 15 years imprisonment to intentionally develop a human embryo outside the body of a woman for a period of more than 14 days [*Prohibition of Human Cloning for Reproduction Act 2002* s14].

2.6 If the applicant intends to use any material (other than an excess ART embryo) created, developed or produced under another mitochondrial donation licence provide details of the material that is intended to be used and the licence under which it was created³⁹.

2.7 Short description of proposed activity in plain English

Please note that in the event that a licence is granted the information provided here will be used in the public licence database. Please clearly identify any information that is not suitable for publication in the database.

NHMRC will confirm the content of the database entry with licence holders before the licence record is published.

³⁹ Any material created, developed or produced under another mitochondrial donation licence that is intended to be used in the present application must have been provided by the responsible person with proper consent. In the case of material created, developed or produced under a mitochondrial donation licence related to research and training proper consent would need to include future use in a clinical reproductive setting. This may mean that re-consent for such purposes may need to be sought from existing donors.

2.8 Facilities, equipment and processes to be used to undertake licensed activities.

2.9 Detailed description of proposed project⁴⁰

Provide a detailed outline of the proposed project. Include information on the following aspects of the proposed activity:

- aims - describe the specific aims of the project, including a clear statement of the hypothesis to be tested (if applicable)
- background - describe the significance of the project in relation to the existing state of knowledge and include a short review of relevant literature
- methodology and experimental design - describe the research plan in detail, including as appropriate, a detailed description of the experimental design, techniques to be used and methods of statistical analysis
- training to be conducted including who will provide and who will undertake the training and what is the purpose of the training
- outcomes - including defined endpoints of the proposed activity.

⁴⁰ NOTE: In the event of the application being sent to external experts, any confidential commercial information would be removed from the application. Therefore, the project description should be able to be understood when this information is removed. The application should clearly identify any confidential commercial information. (See section 6 below).

2.10 PROJECT REQUIREMENTS

In deciding whether to issue the licence, ERLC must have regard to restricting the number embryos, human eggs or zygotes to that likely to be necessary to achieve the goals of the activity or project proposed in the application.⁴¹ ERLC may impose a condition on the licence limiting the number of embryos or human eggs or zygotes that may be used in the proposed activity.⁴²

2.10.1 Proposed number of embryos likely to be created to achieve the goals of the proposed activity and an explanation of why the number proposed is necessary.

2.10.2 Proposed number of human eggs or zygotes likely to be necessary to achieve the goals of the proposed activity and explanation of why the number proposed is necessary.

2.10.3 Likelihood of significant advance in knowledge or improvement in technology as a result of the creation and/or use of embryos or human eggs.

2.10.4 Justification for why the advances described above could not reasonably be achieved by other means.

Section 3 – Obtaining proper consent

3.1 PROPER CONSENT

ERLC cannot issue a licence unless satisfied that proper protocols are in place so that proper consent is obtained before human gametes or genetic or reproductive material are used in carrying out the technique(s) authorised by the licence.⁴³

When developing the consent process and documents, please consult:

- *Research Involving Human Embryos Act 2002* (Cth);
- ART Guidelines;
- National Statement; and
- any other relevant advice or guidelines issued by the NHMRC.

3.1.1 Overview of process for the responsible persons and mitochondrial donors to give proper consent for the use of their human eggs or human sperm under the licence.

Provide a detailed description of how and when proper consent from donors will be obtained and how you will ensure that you notify ERLC that proper consent has been obtained before each human egg or human sperm is used under the licence.

Provide attachments and note the attachment numbers in this box.

3.1.2 Documents to be provided to obtain proper consent from responsible persons and mitochondrial donors

Attach copies of all documentation intended to be provided to donors to obtain proper consent and note attachment numbers in this box. Do not attach any signed consent forms or forms containing personal information about donors.

3.1.3 Describe how you will ensure that any conditions on the consent given by donors are adhered to.

3.1.4 Payment of reasonable expenses⁴⁴

Specify the amount, if any, to be paid to research participants and/or donors and provide a justification for the level of reimbursement of reasonable expenses.

Describe what measures will be put in place to ensure that only reasonable expenses as defined by the *Prohibition of Human Cloning for Reproduction Act 2002* are paid and that no other inducement is offered.

Attach a copy of all documentation used and note attachment numbers in this box.

Section 4 - Compliance Matters

RESTRICTIONS ON THE DEVELOPMENT OF HUMAN EMBRYOS

- 4.1 Detail the policies, procedures or protocols that are in place for ensuring that:
- (a) a human embryo is not allowed to develop for more than 14 days outside the body of a woman
 - (b) a human embryo is not allowed to be placed into the body of a woman for the purposes of achieving pregnancy in that woman
 - (c) no human egg or human sperm is used without the written consent of the donor or against any restrictions on that consent
 - (d) any material created, developed or produced under the licence is not used unless expressly permitted by the licence; and
 - (e) No permitted activity is undertaken anywhere other than an accredited ART centre.

Provide attachments if necessary and note the attachment numbers in this box.

4.2 Detail the policies, procedures or protocols that are in place for the disposal of material produced by the activates authorised by the licence.

Mitochondrial donation licences may be subject to conditions relating to the disposing of material produced by using the relevant mitochondrial donation technique [28N(5)(f)] and 11A].

Provide attachments if necessary and note the attachment numbers in this box.

4.3 Describe the tracking system that will be used to identify the human eggs or human sperm used, or embryos created or used in the proposed activity.

Maintenance of a tracking system that links individual embryos, eggs and sperm to a specific licence and donors will be a condition of a licence granted and NHMRC Inspectors will audit the system during their inspections.

Provide attachments if necessary and note the attachment numbers in this box.

Section 5 – Information updating

5.1 Identify any policies procedures or protocols that are in place for ensuring that any changes to any of the information provided are reported to ERLC

It will be a licence condition of any mitochondrial donation licence granted that the licence holder notify ERLC of any changes to information provided in support of a mitochondrial donation licence application.

Provide attachments if necessary and note the attachment numbers in this box.

Section 6 - HREC evaluation of the proposal

6.1 NAME OF HREC

6.2 CHAIRPERSON OF HREC

Note that the Chairperson of the HREC is required to sign this application at Section 8
